Roche - My Congress

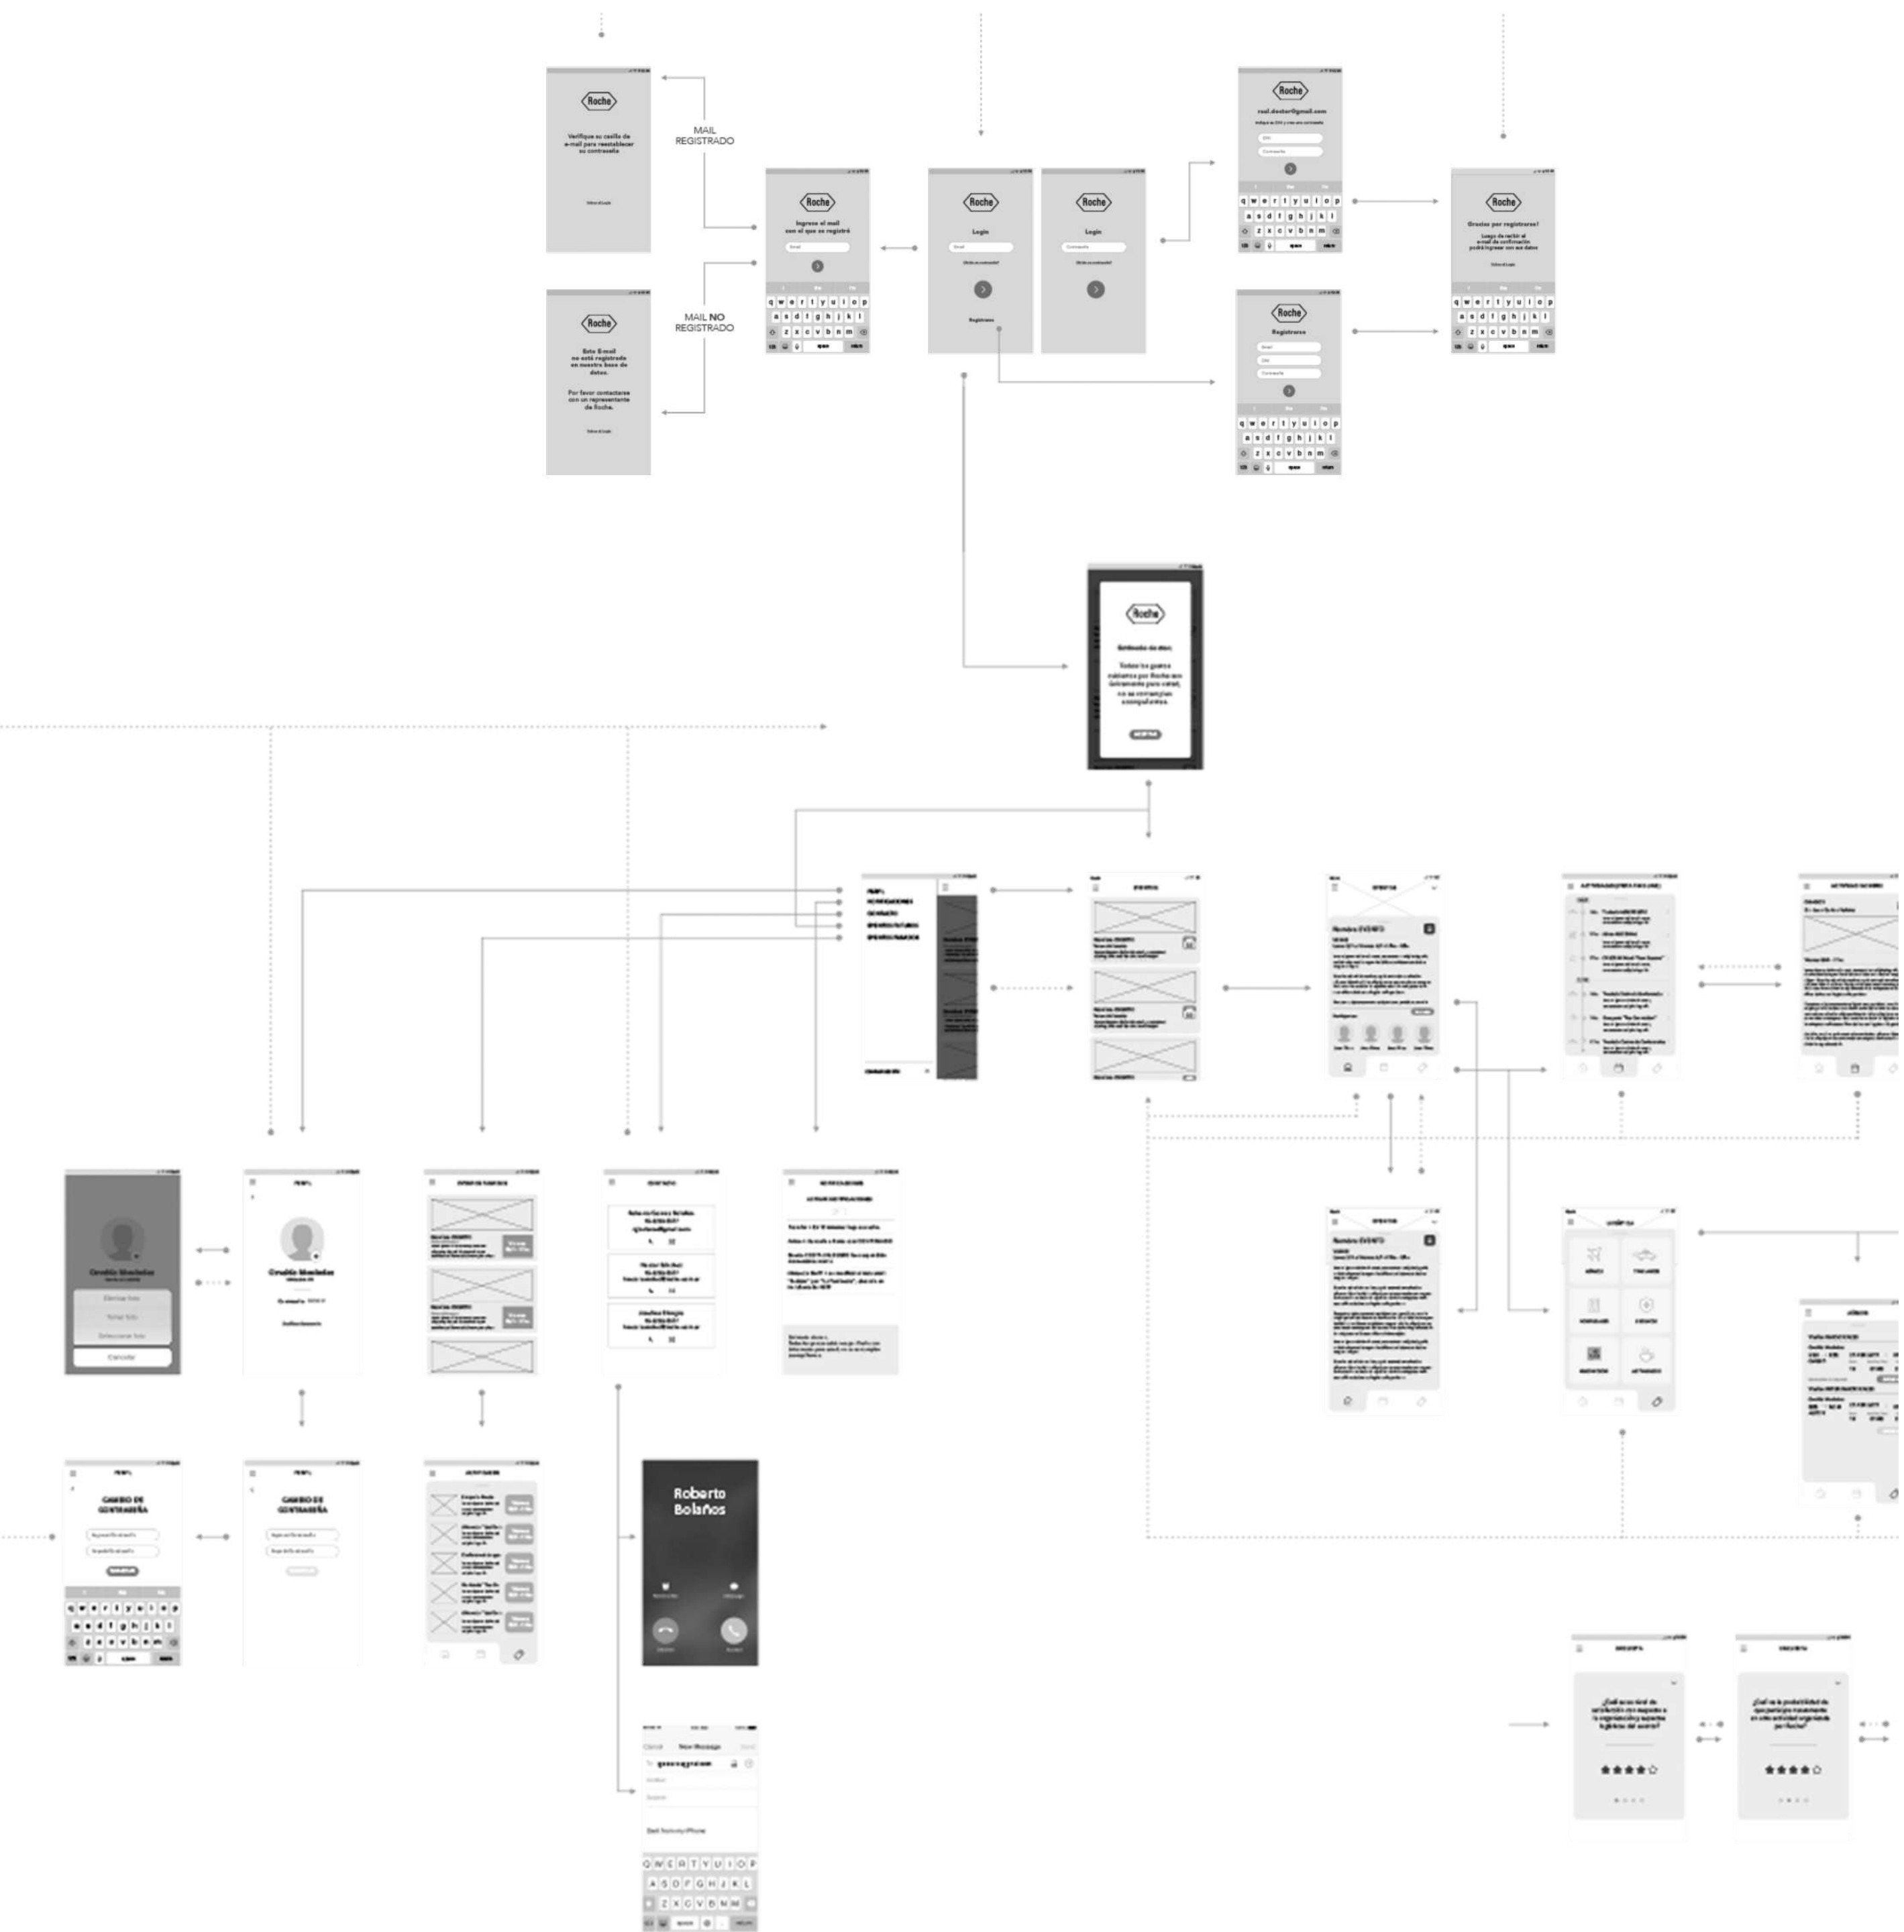

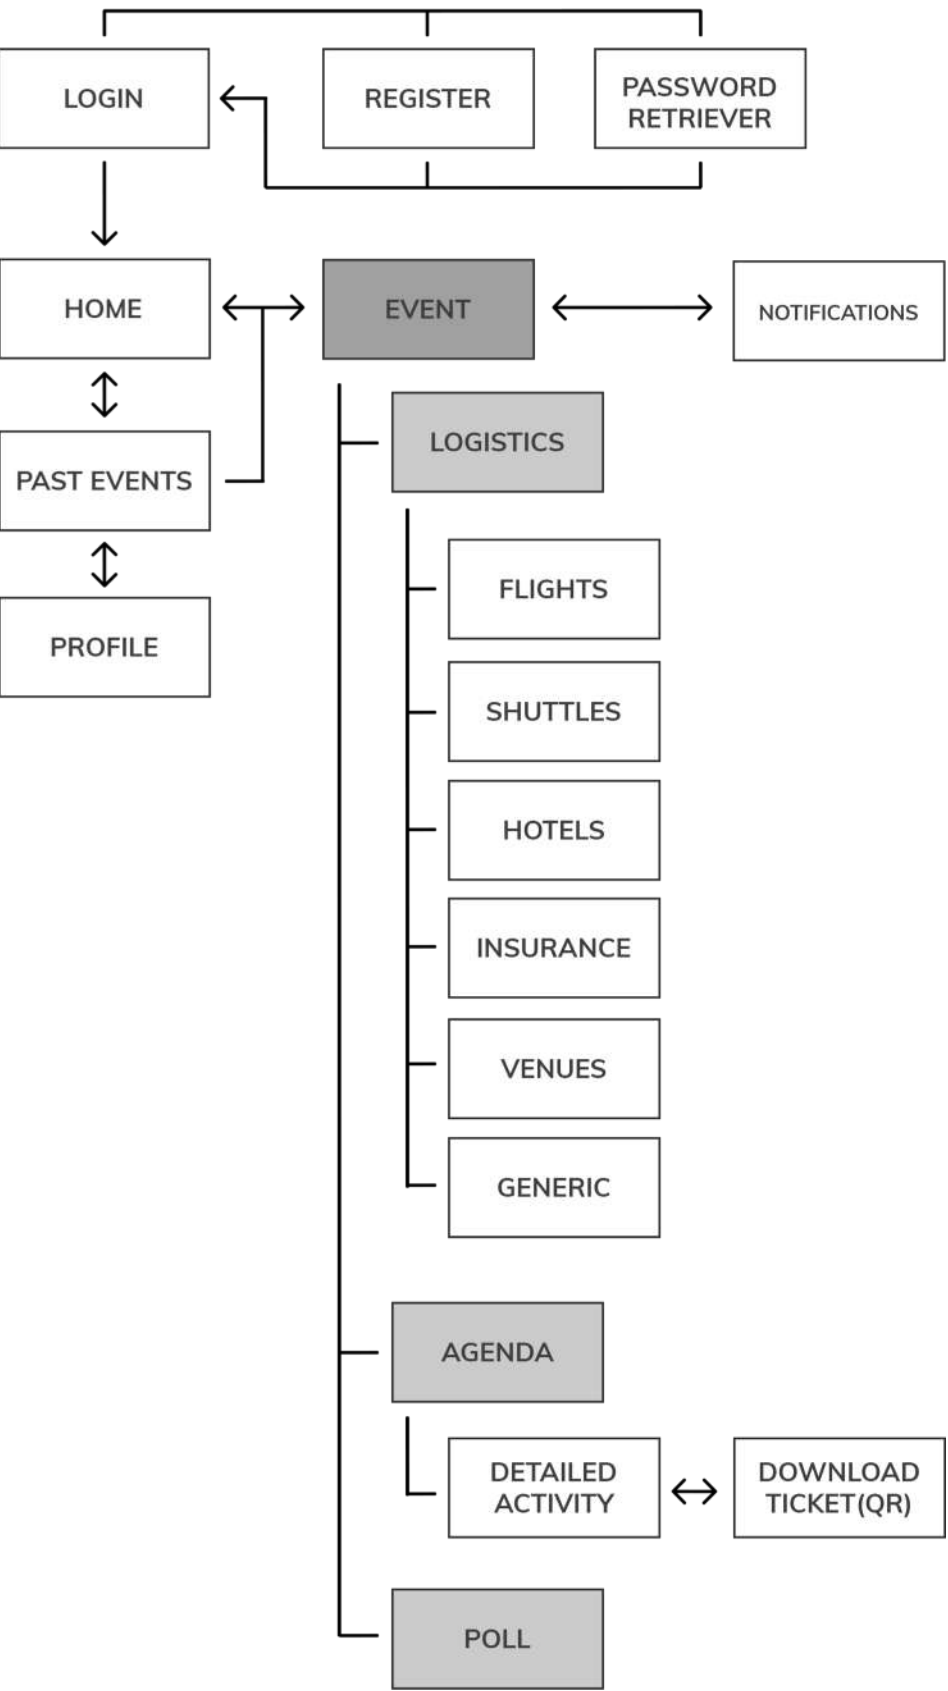

Roles: UX / UI

Project was based on building a simple app for hosting events and activities related to medicine and laboratories, schedule flights and tickets for their guests.

Guests were able to check their credentials, invitations, transportation and detailed info about each event.

Banco Patagonia – Insurance portal

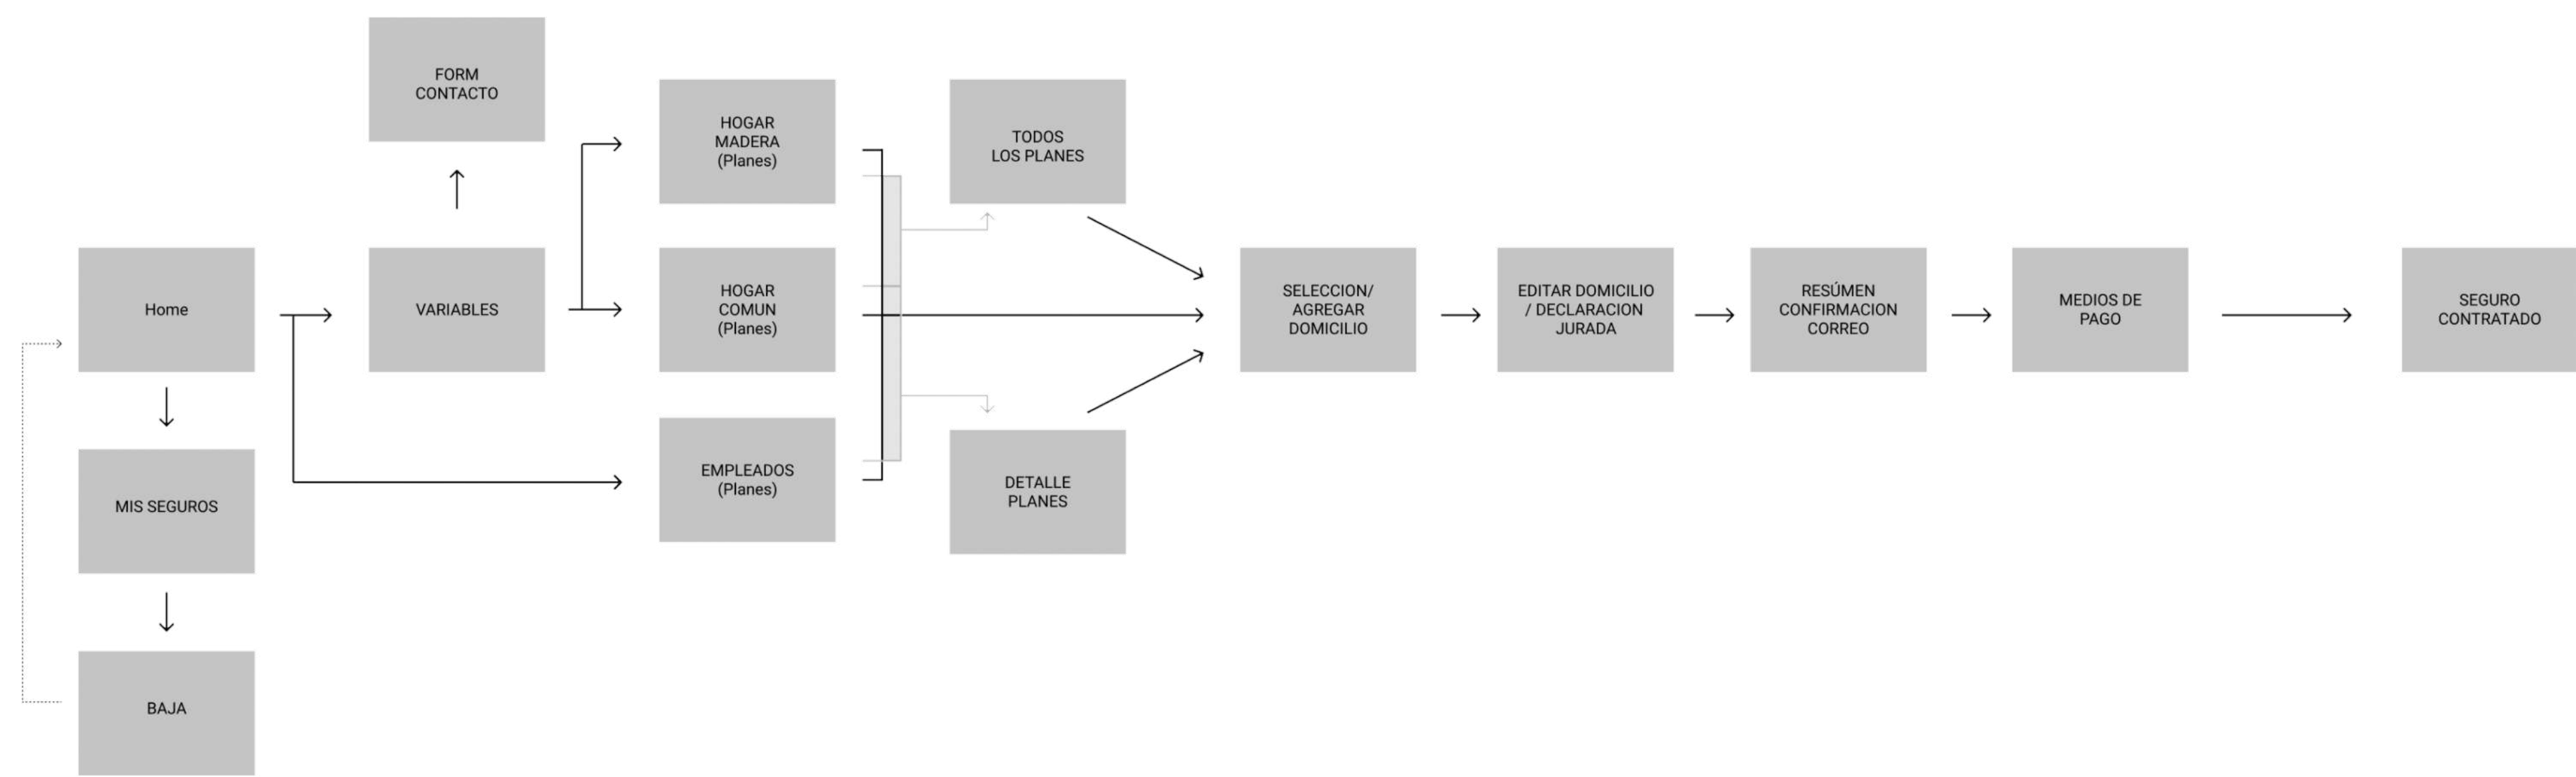

Roles: UX / UI

Responsive Web created from scratch. Research competitors, styles, personas. We run into user testing over first prototypes and we managed the best experience to get a new insurance policy.

Both desktop and mobile, should have same neat experience with all styled guidelines from client's branding.

CLEAN MOCKUPS

Guidelines were based on creating very simple icons to make experience less structured and formal, and get a better approach to regular people, to inform from products which they never stop and read about.

Simply.vision – analyze.life app

Role: Branding / Product / UX & UI Design

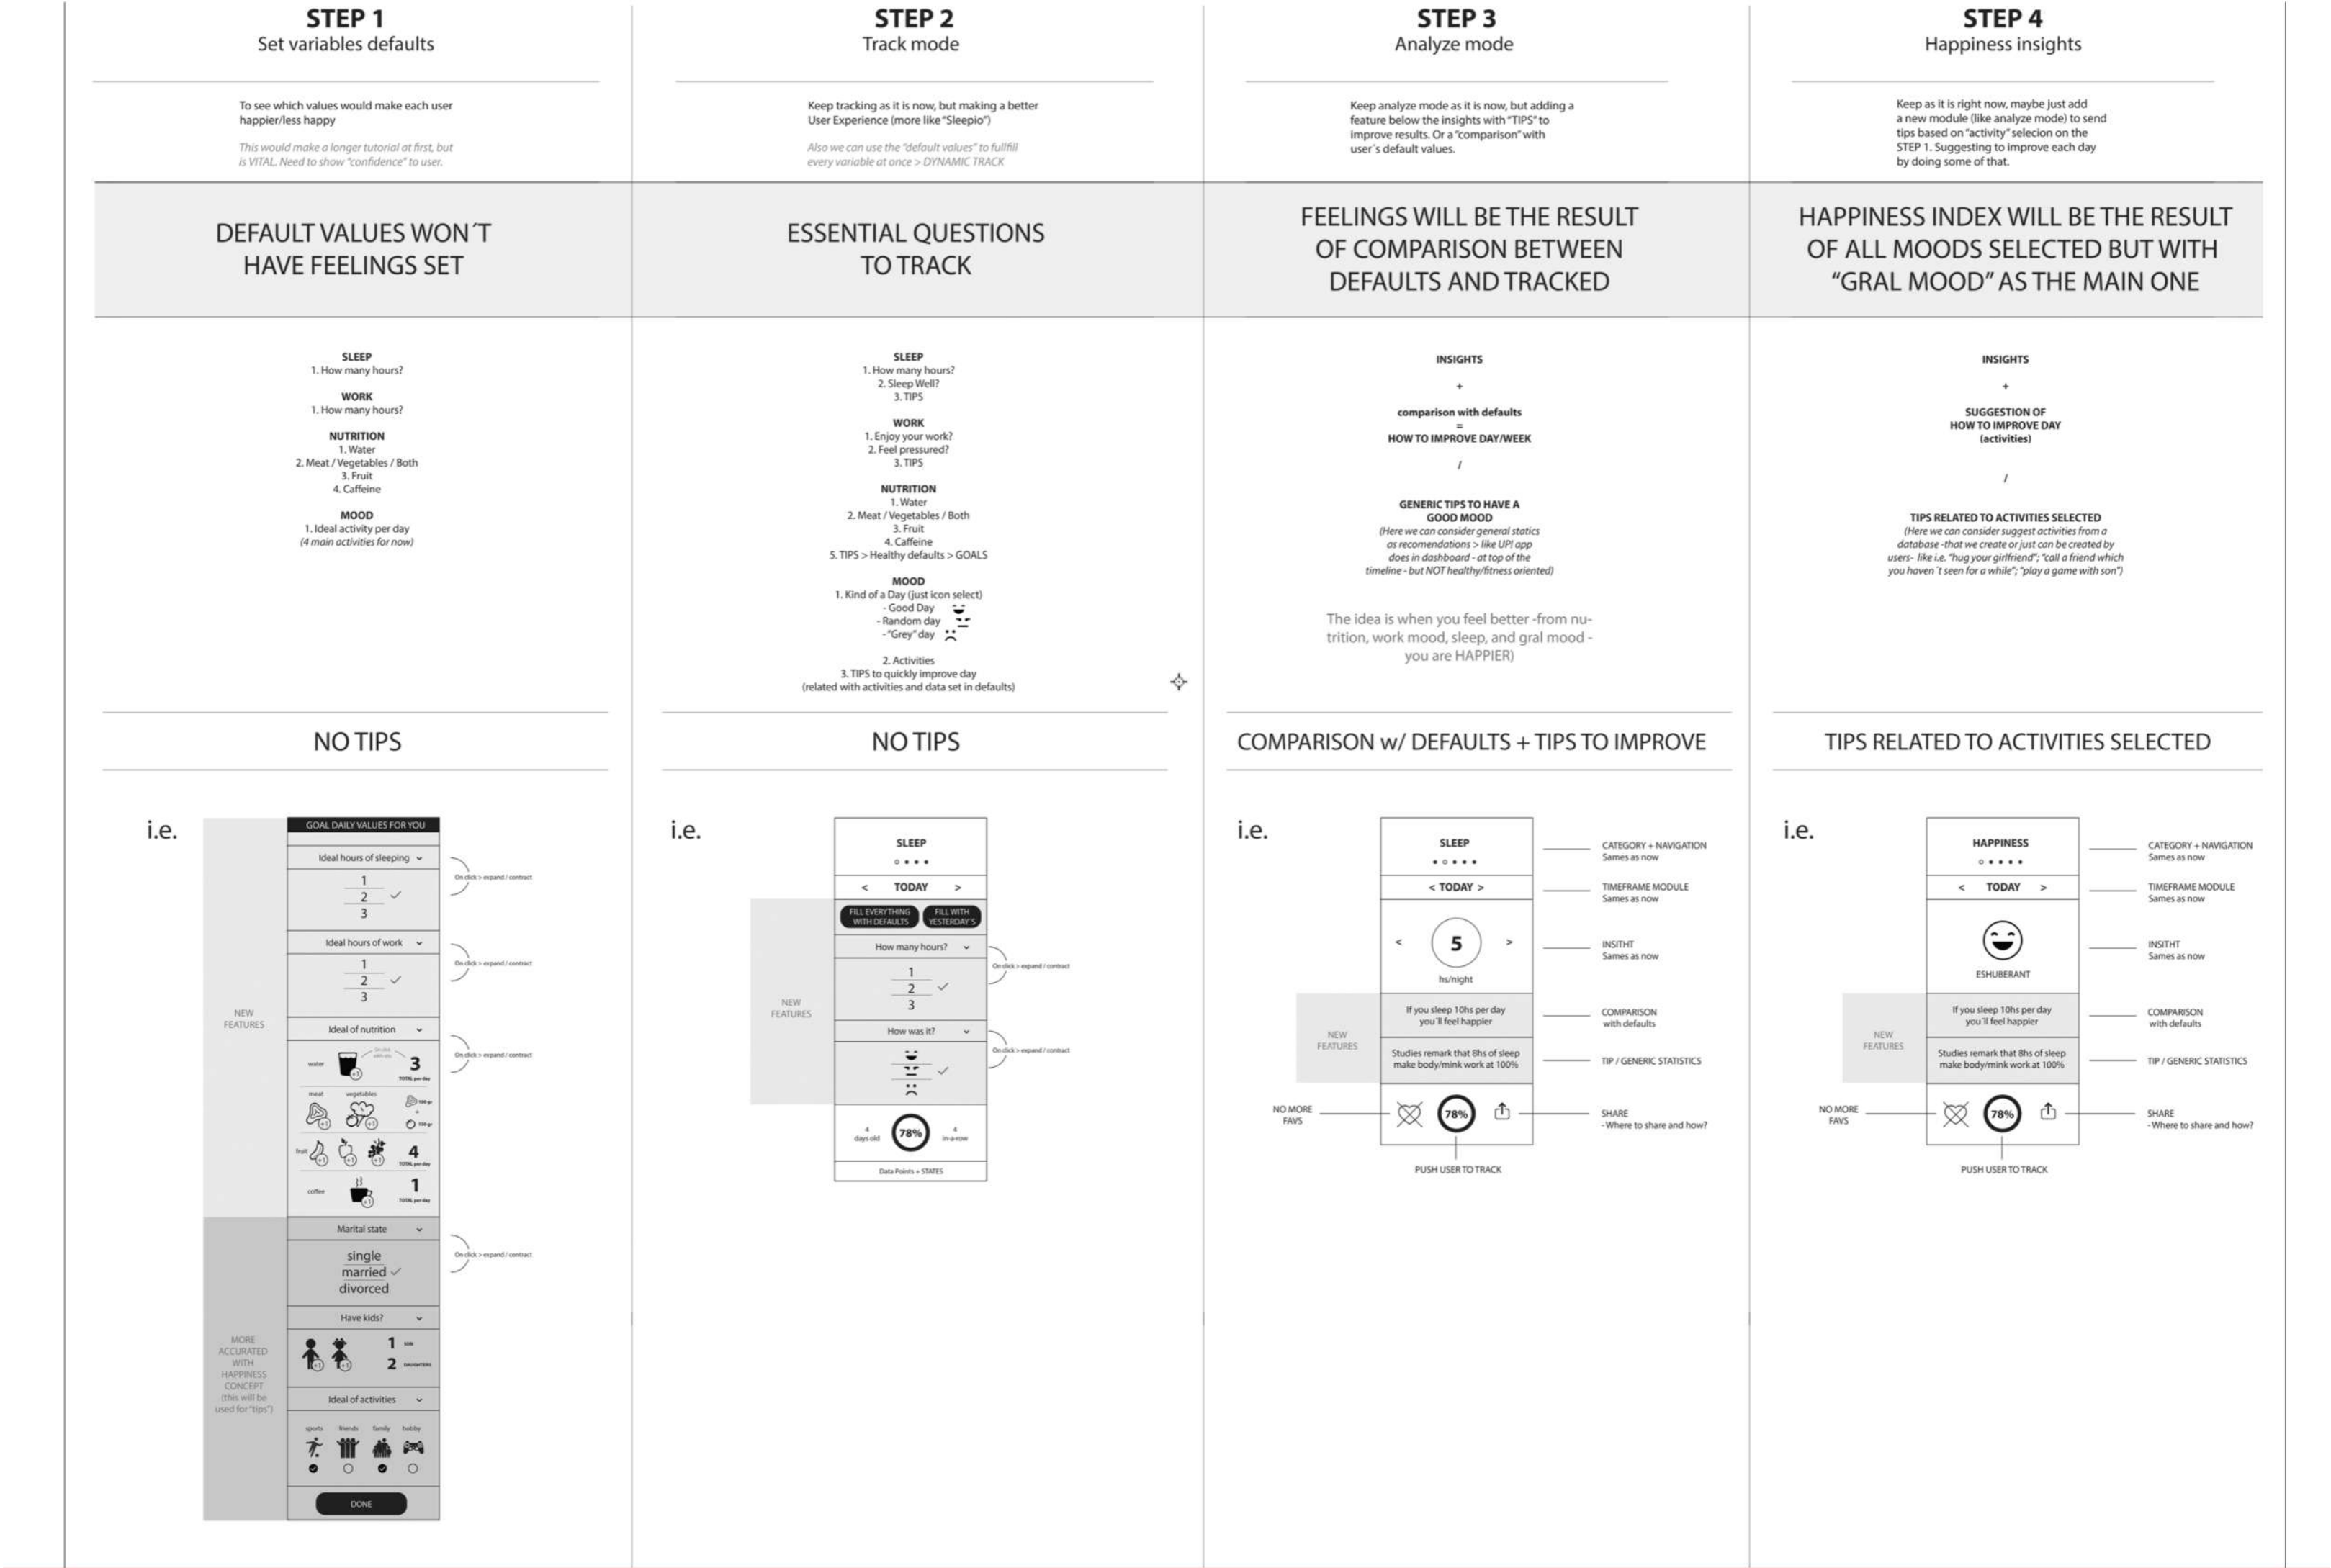

Main concept for analyze.life was to “help people” grow into their lives by understanding how their happiness was build day-by-day.

Research about ‘self-helpness’ books, articles, was all about. Get into this world which has a grown community.

As the user would have to track every single day info to analyze and get back to him/her with significant results (app value).

Ezequiel de Francisco

Simply.vision – analyze.life app

ANALYSIS

The complexity on the calculation of each category and total score define an accurate response to show % of happiness, has taken some deep **analysis** on every single tracking info we may have.

Ezequiel de Francisco

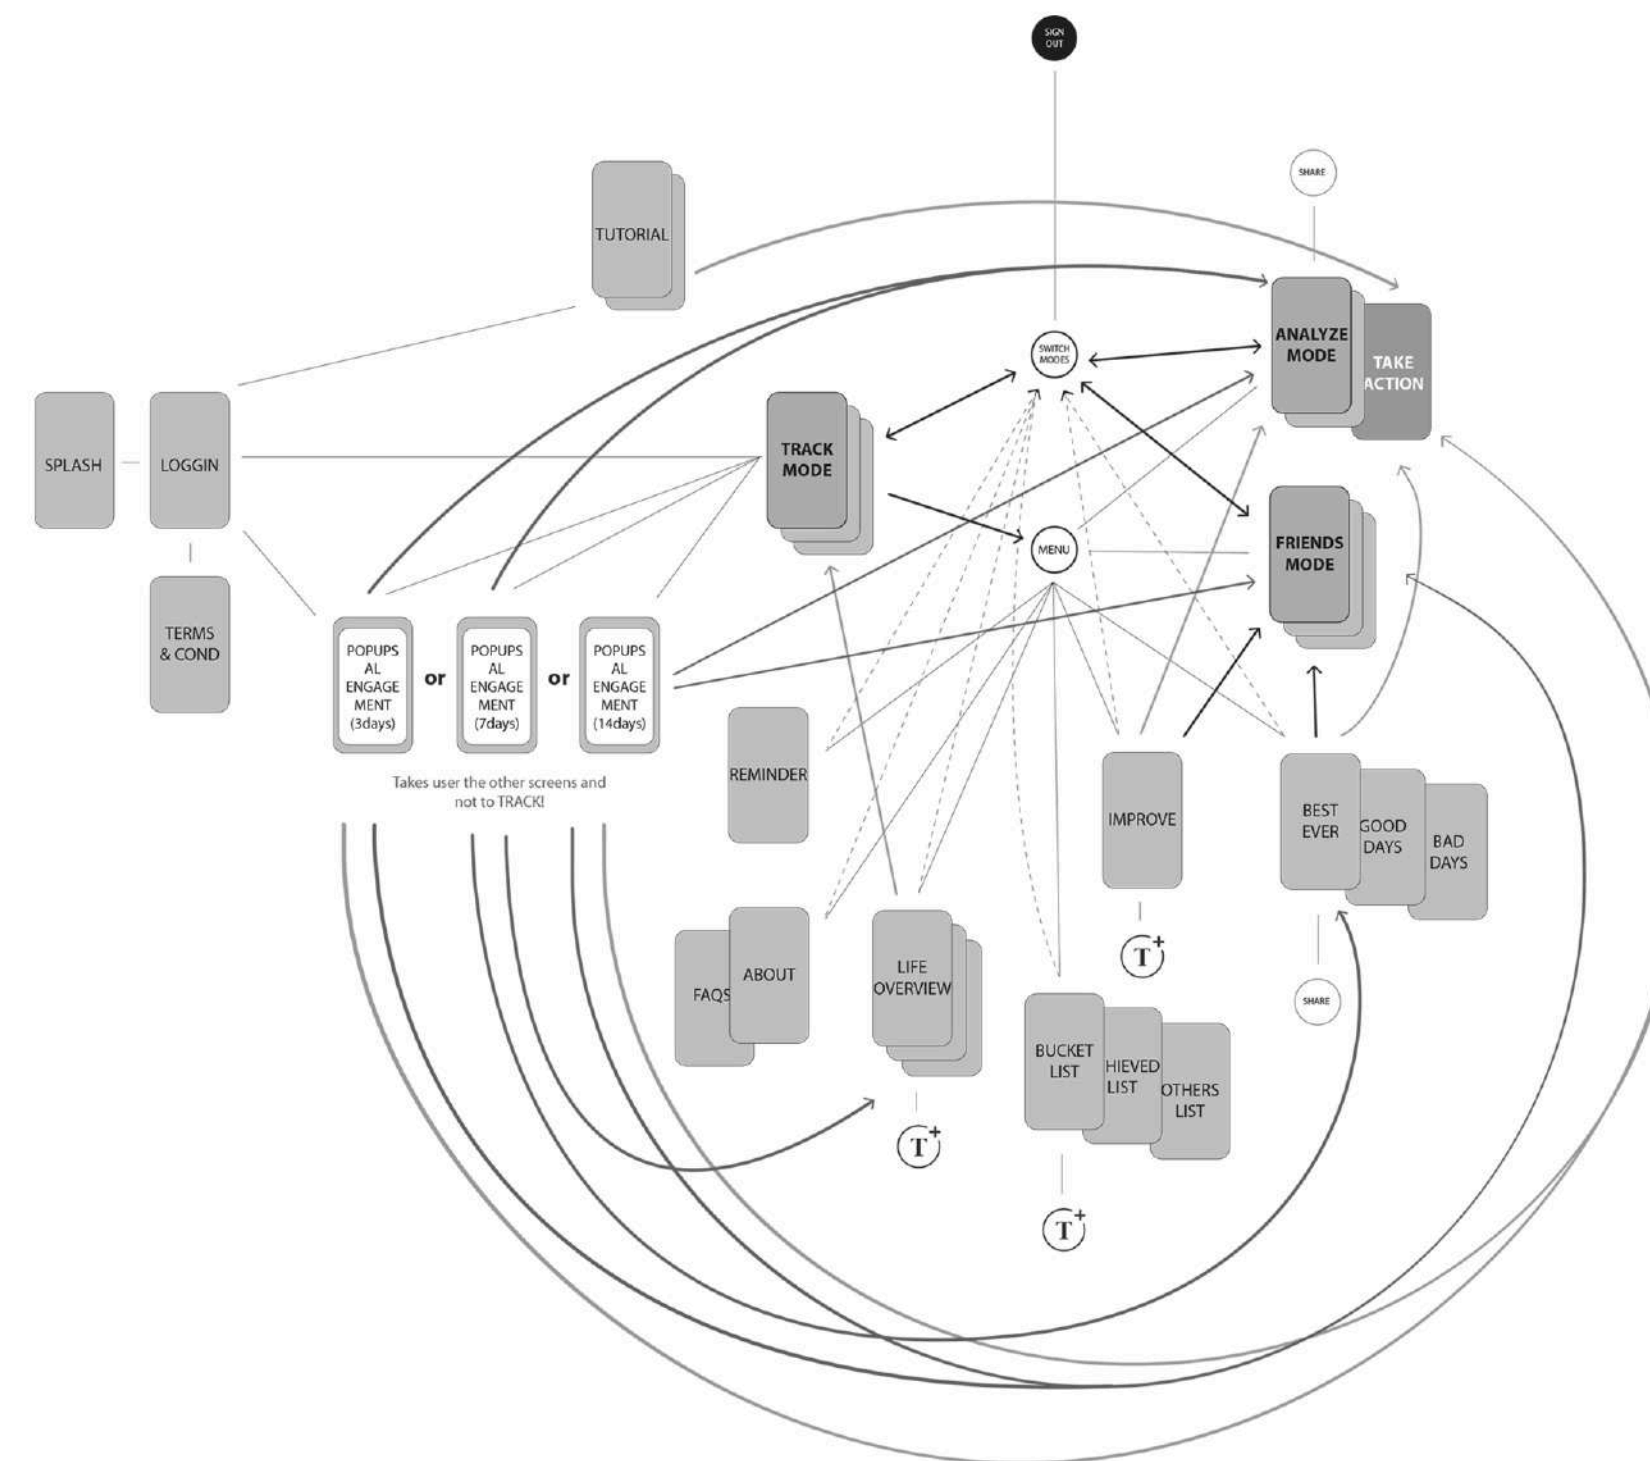

Simply.vision – analyze.life app

MAPPING GESTURES

There were too many tapeable 'areas' in screen with different taps/scrolls, so organize them to be clear and not overlap with other elements/functions, as much intuitive as possible.

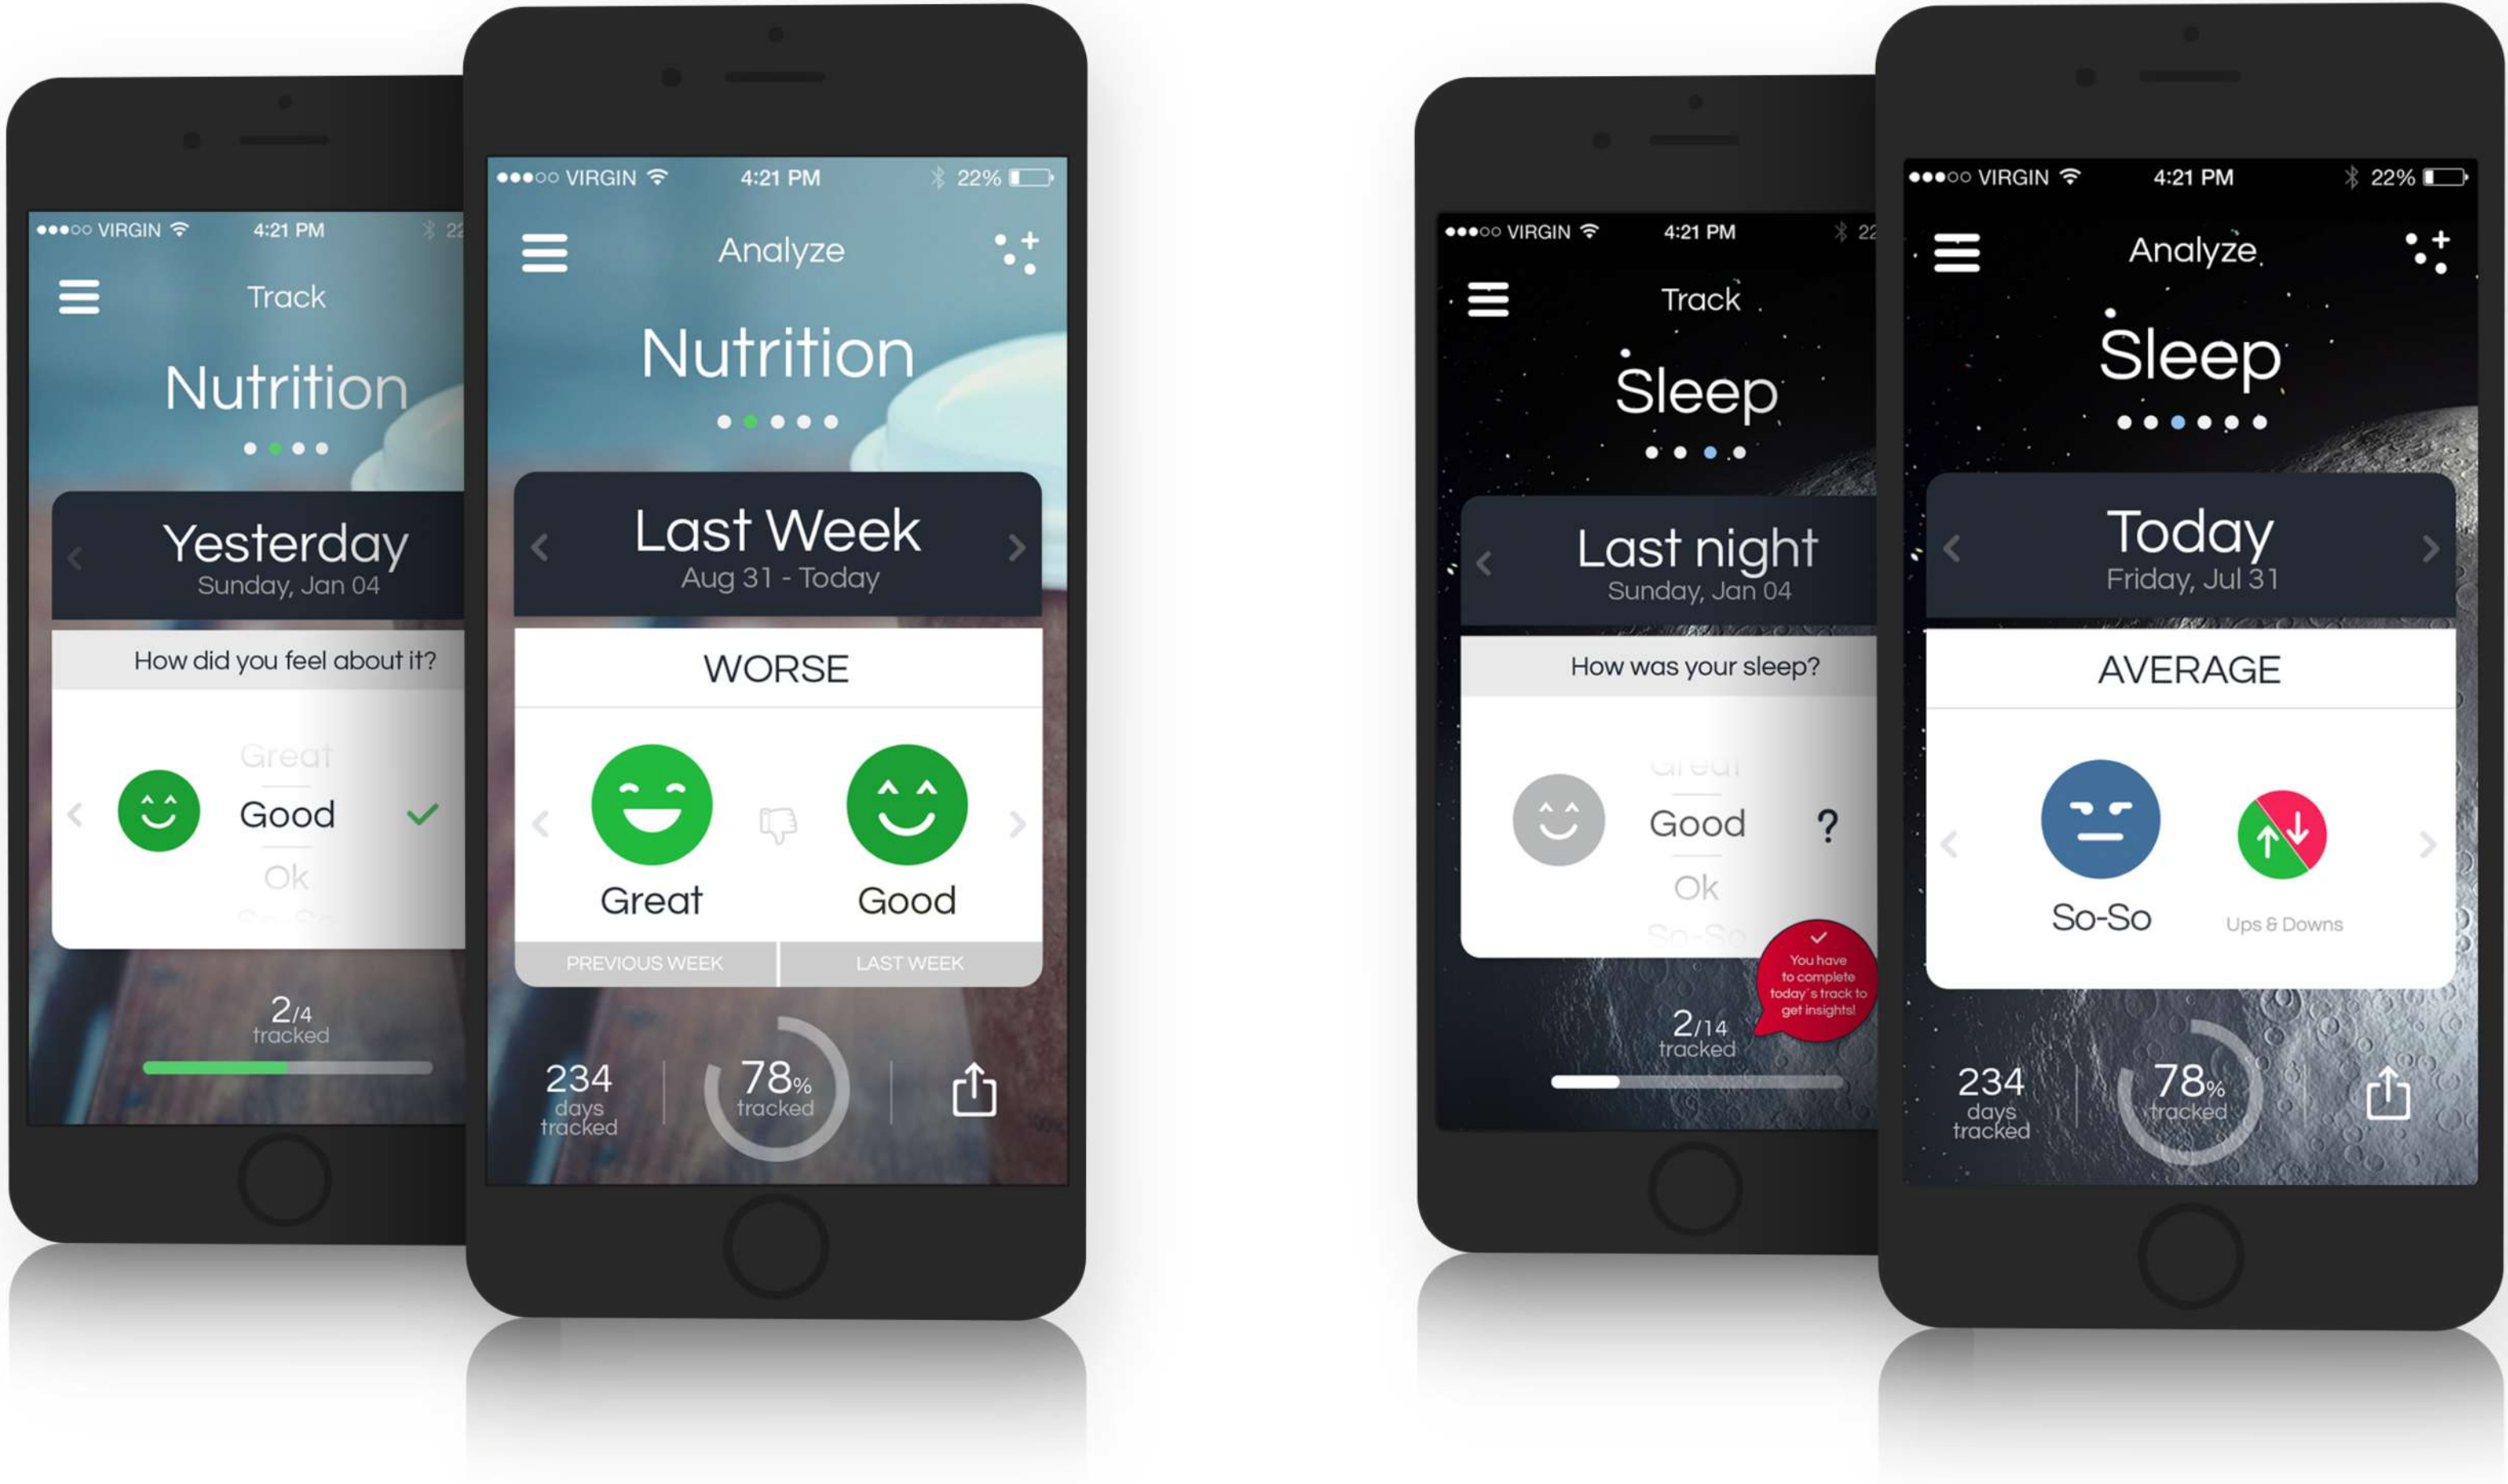

FLOW MAP

Maps to overview functionalities and stages for each phase of the app. Analysis over how delayed is get App value.

Ezequiel de Francisco

Simply.vision – analyze.life app

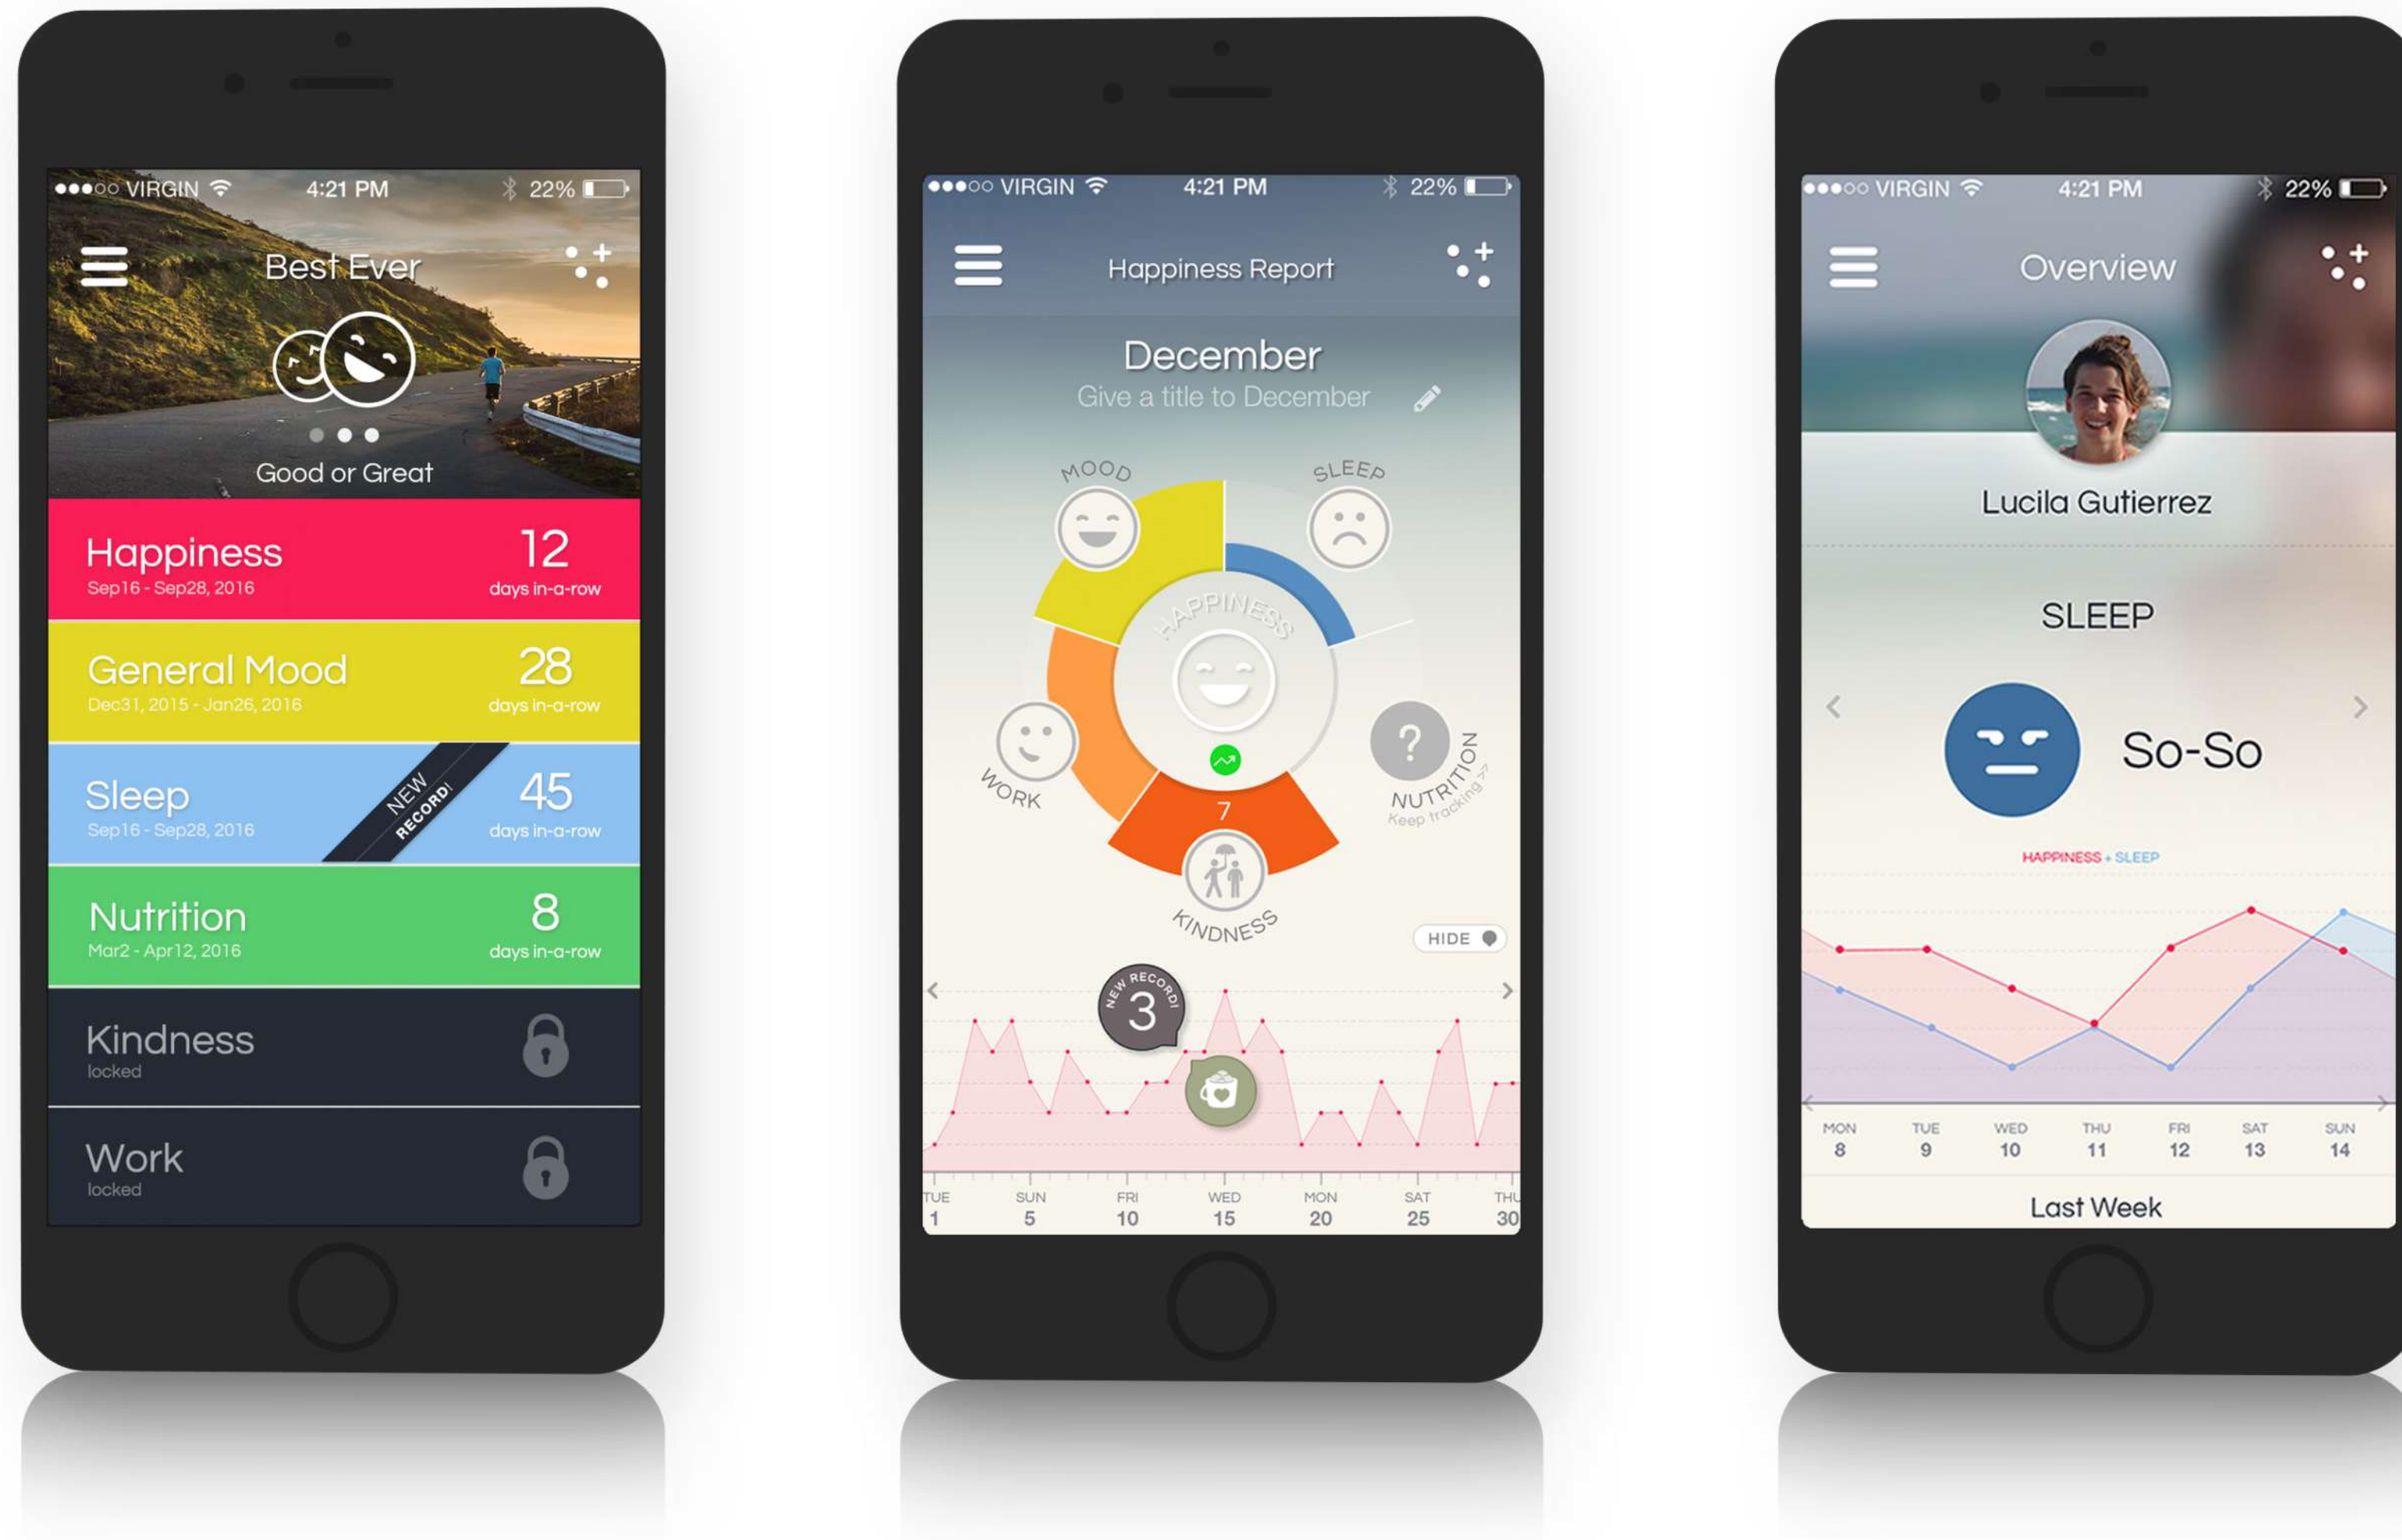

TRACK / RESULTS

Left tracking screens reflect results on the right screens "Analyze". Neat results with colors representing each category.

Simply.vision – analyze.life app

COMPLEX CHARTS

The huge amounts of data tracked over the weeks, gives a very good way to create better and smart approaches to reflect App value, mostly on comparative charts to self evaluate through routine.

Palliative cares – WebApp & Back Office

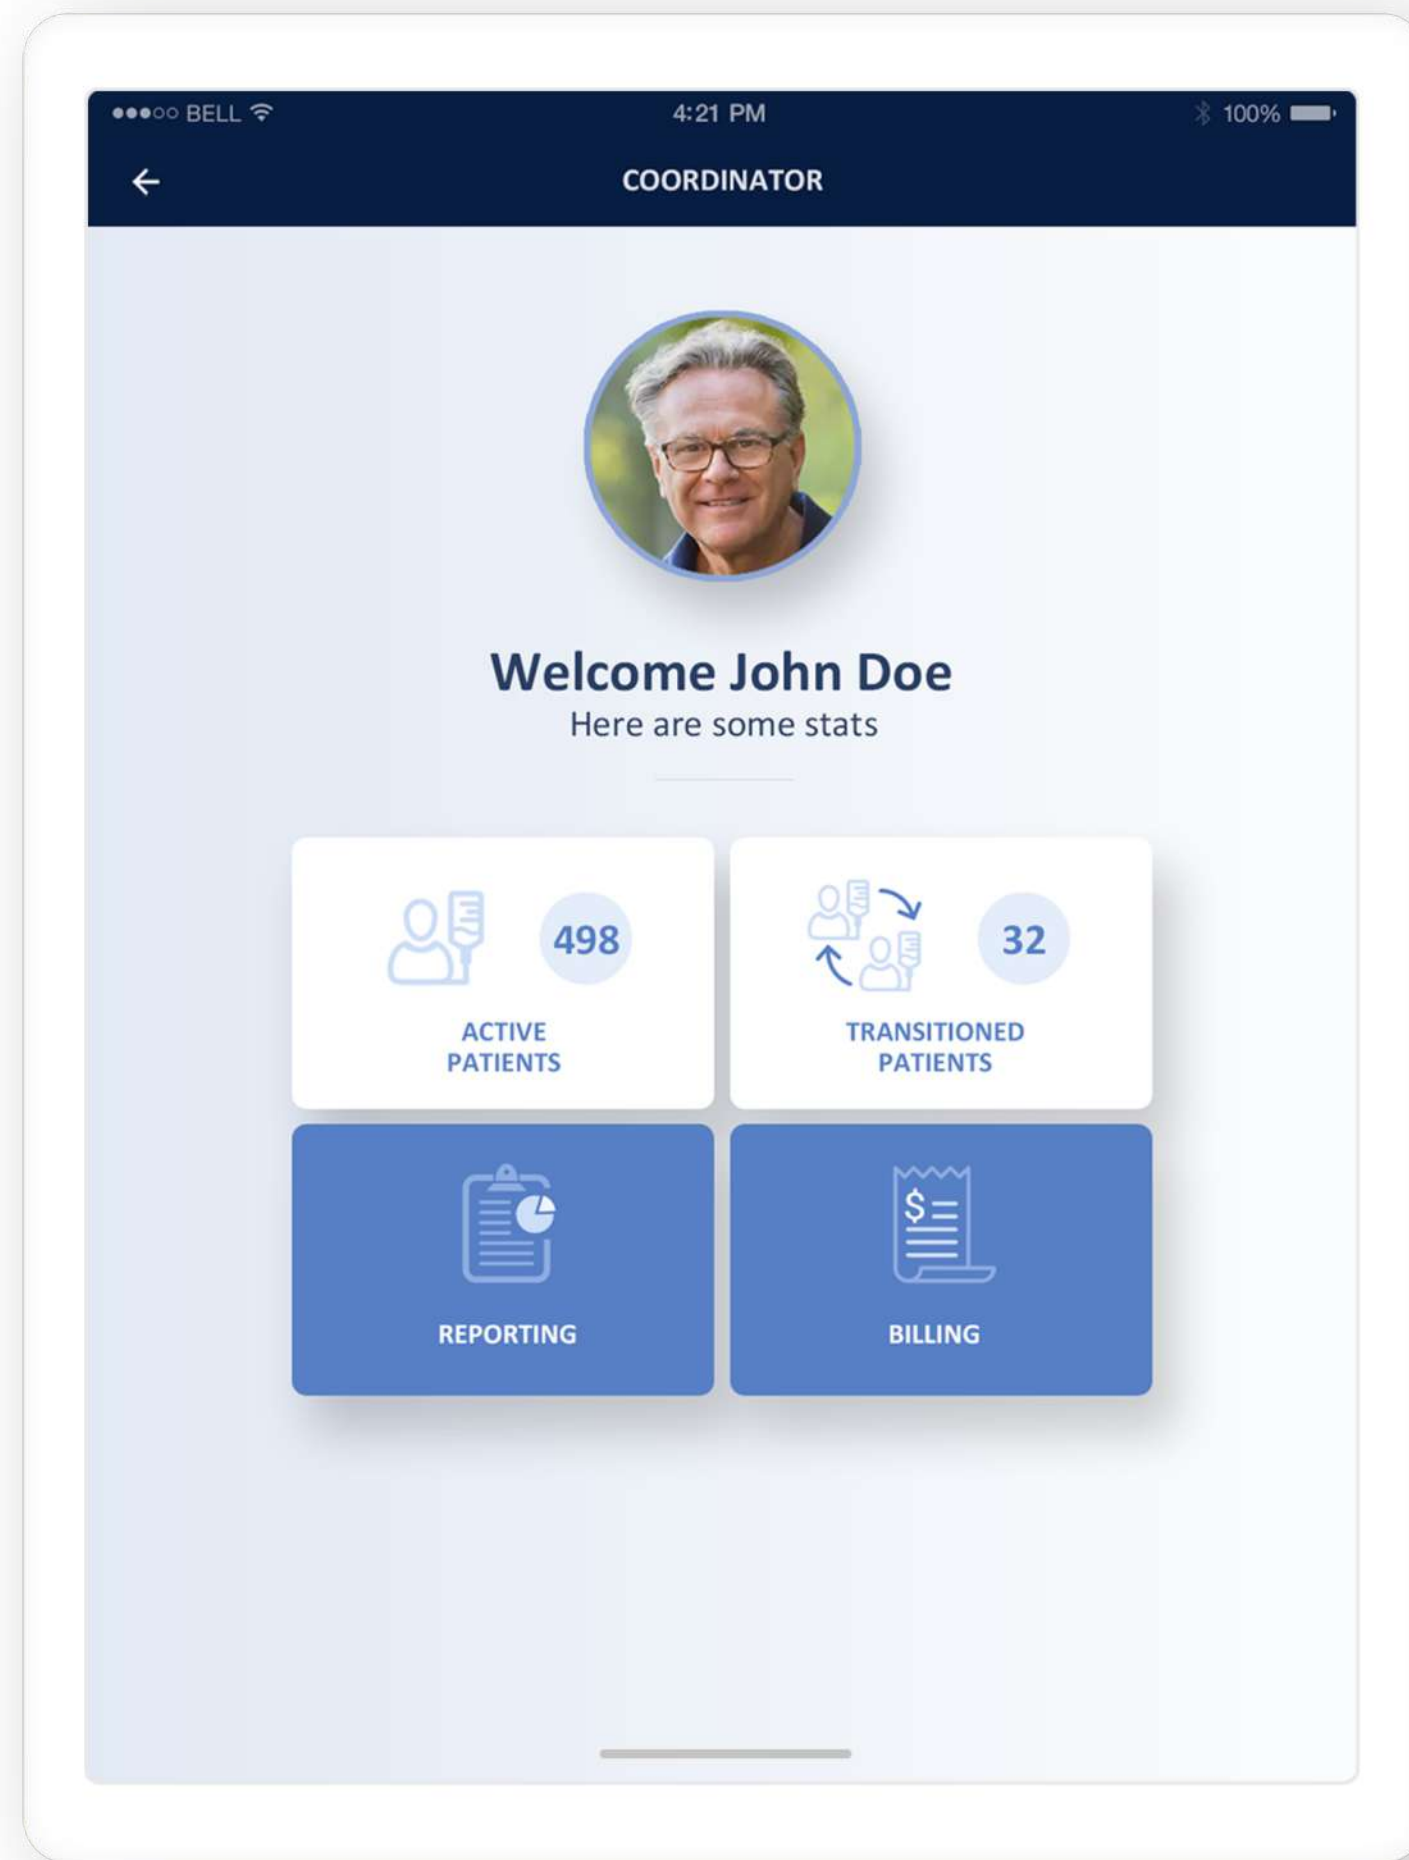

Roles: UI Design

Client asked to develop an app for Nurses, and Administrative Medical Center, who provide Palliative Cares to people with different diseases and elderly.

Due to the huge amount of information, the main goal was to collect all data, and organize properly in forms and sections, create wizard to provide users best and clear experience on tracking information, easy to reach and track. Also an admin (back office) was also needed for main functionalities: add/remove personal, institution, patients, Medical Care Insurances, Hospitals, etc.

Ezequiel de Francisco

Palliative cares – WebApp & Back Office

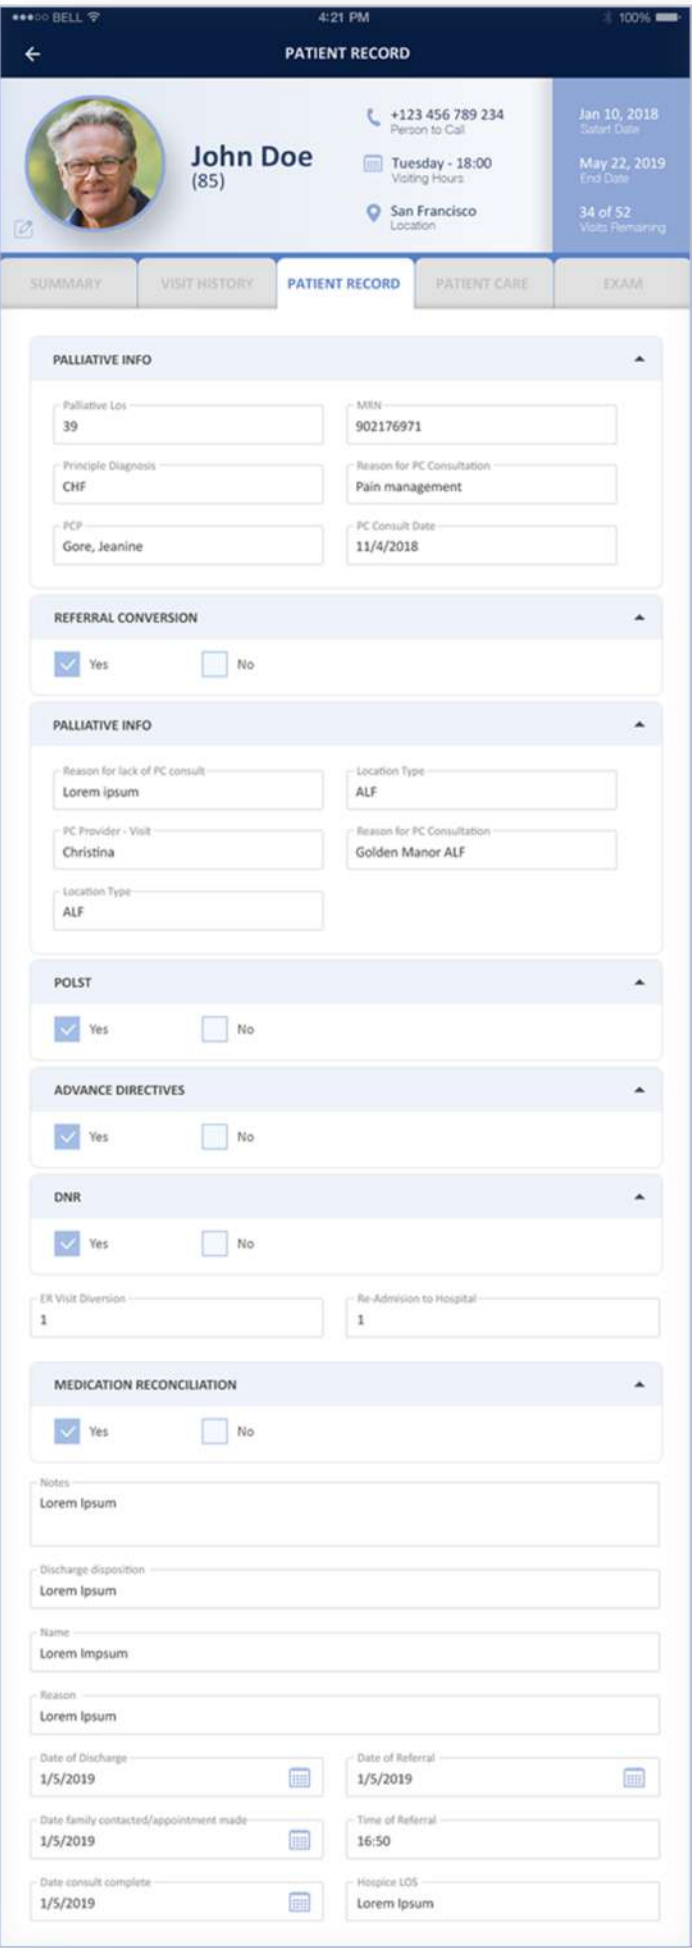

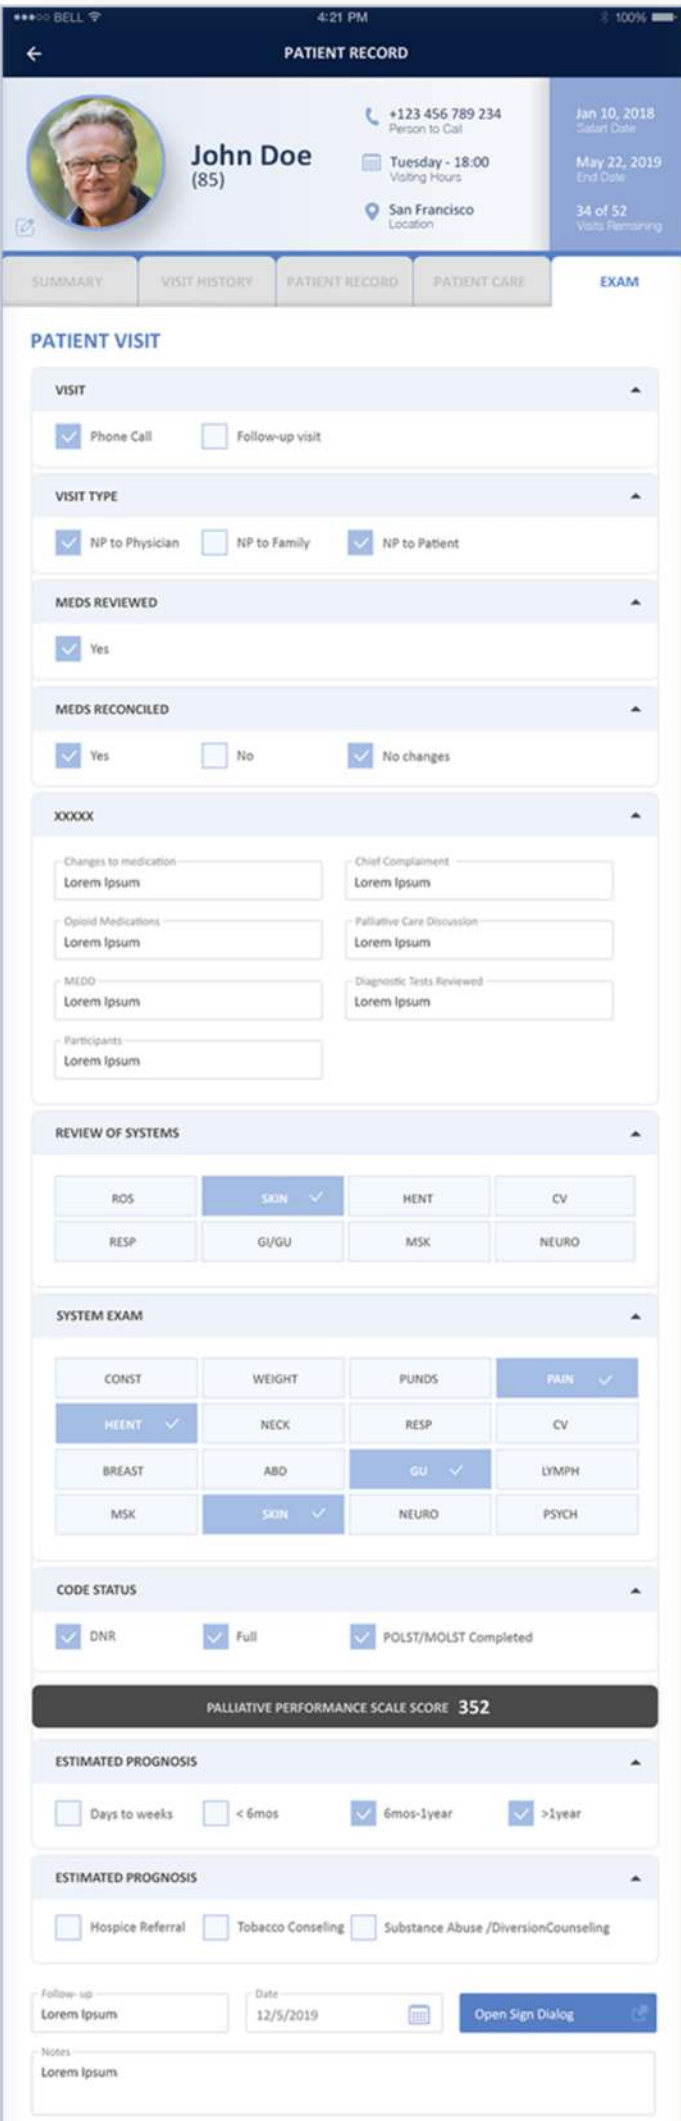

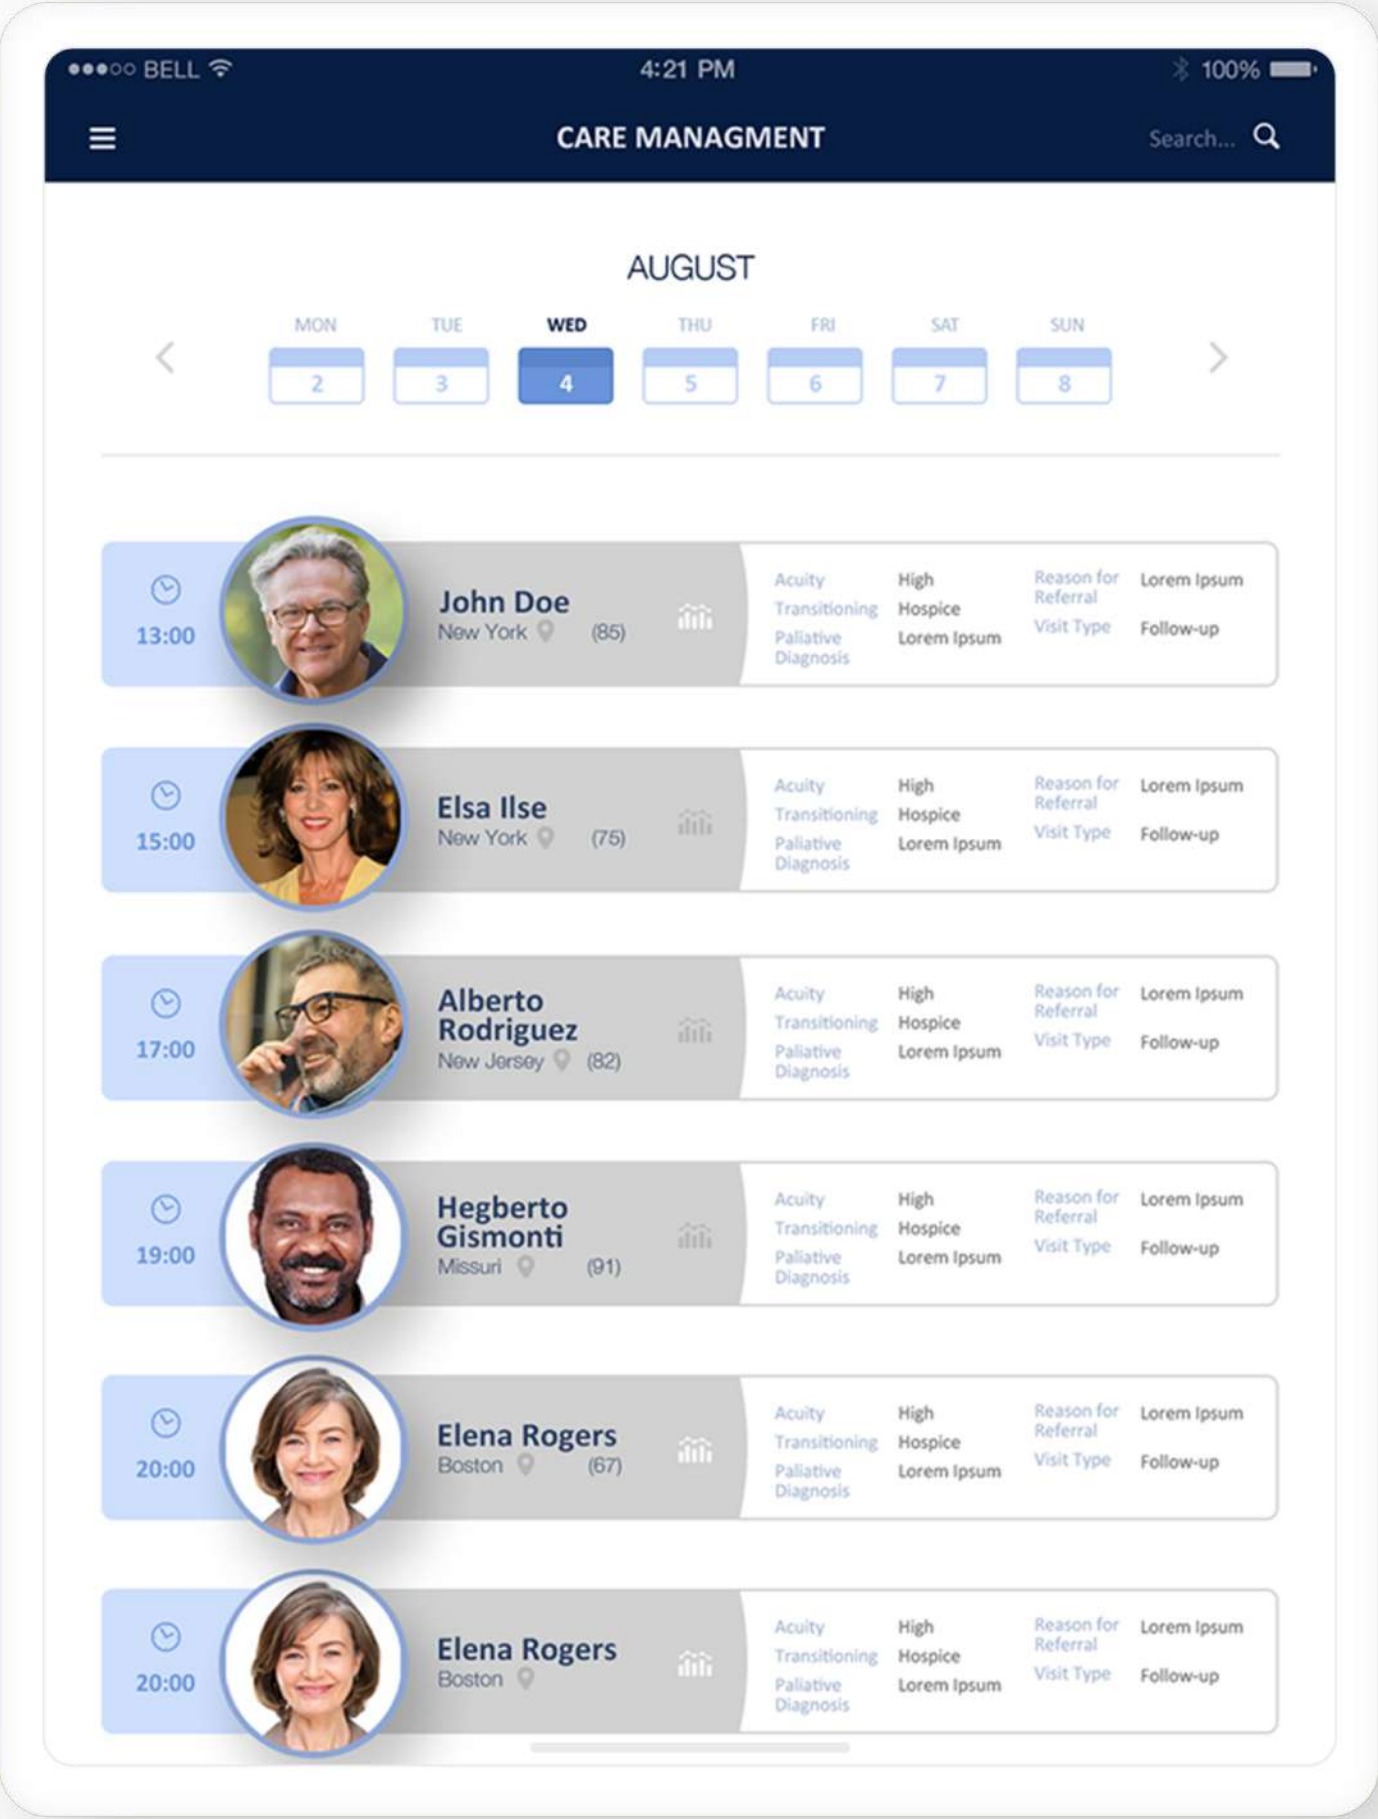

UI DESIGN

Based on a pack or lo-fi wireframes sent by client, I had to bring a neat and styled UI based on medical references. Targeted users would be nurses who make palliative cares on elderly people.

BOLA - Disney

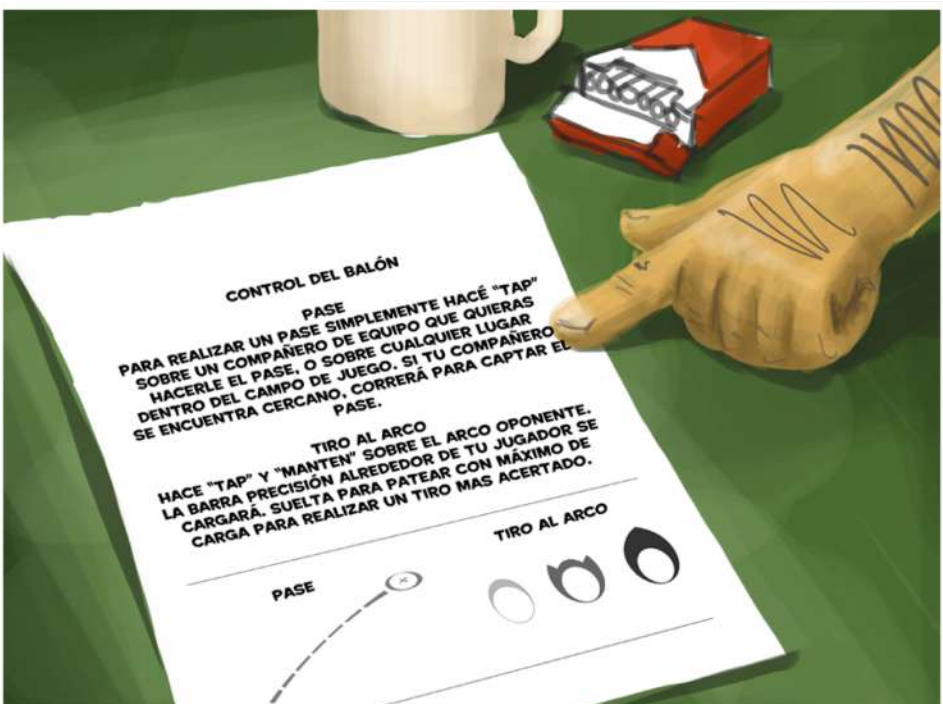

Roles: Art Directon / GUI

Develop a soccer game where users in 3 steps maximum, may play.
Easy flow & play, great performance, an stunning UI.

Besides planning a simple structure map (10 screens), my main work was to create GUI based on logo. On boarding process was needed, some creative screens to make a 'story' about playing a soccer game, trophies to win, team management, where the ideas to develop this fun game. I've created sketches for all screens to determine the aesthetics to follow, then Disney illustrators make final drawings.

Ezequiel de Francisco

BOLA - Disney

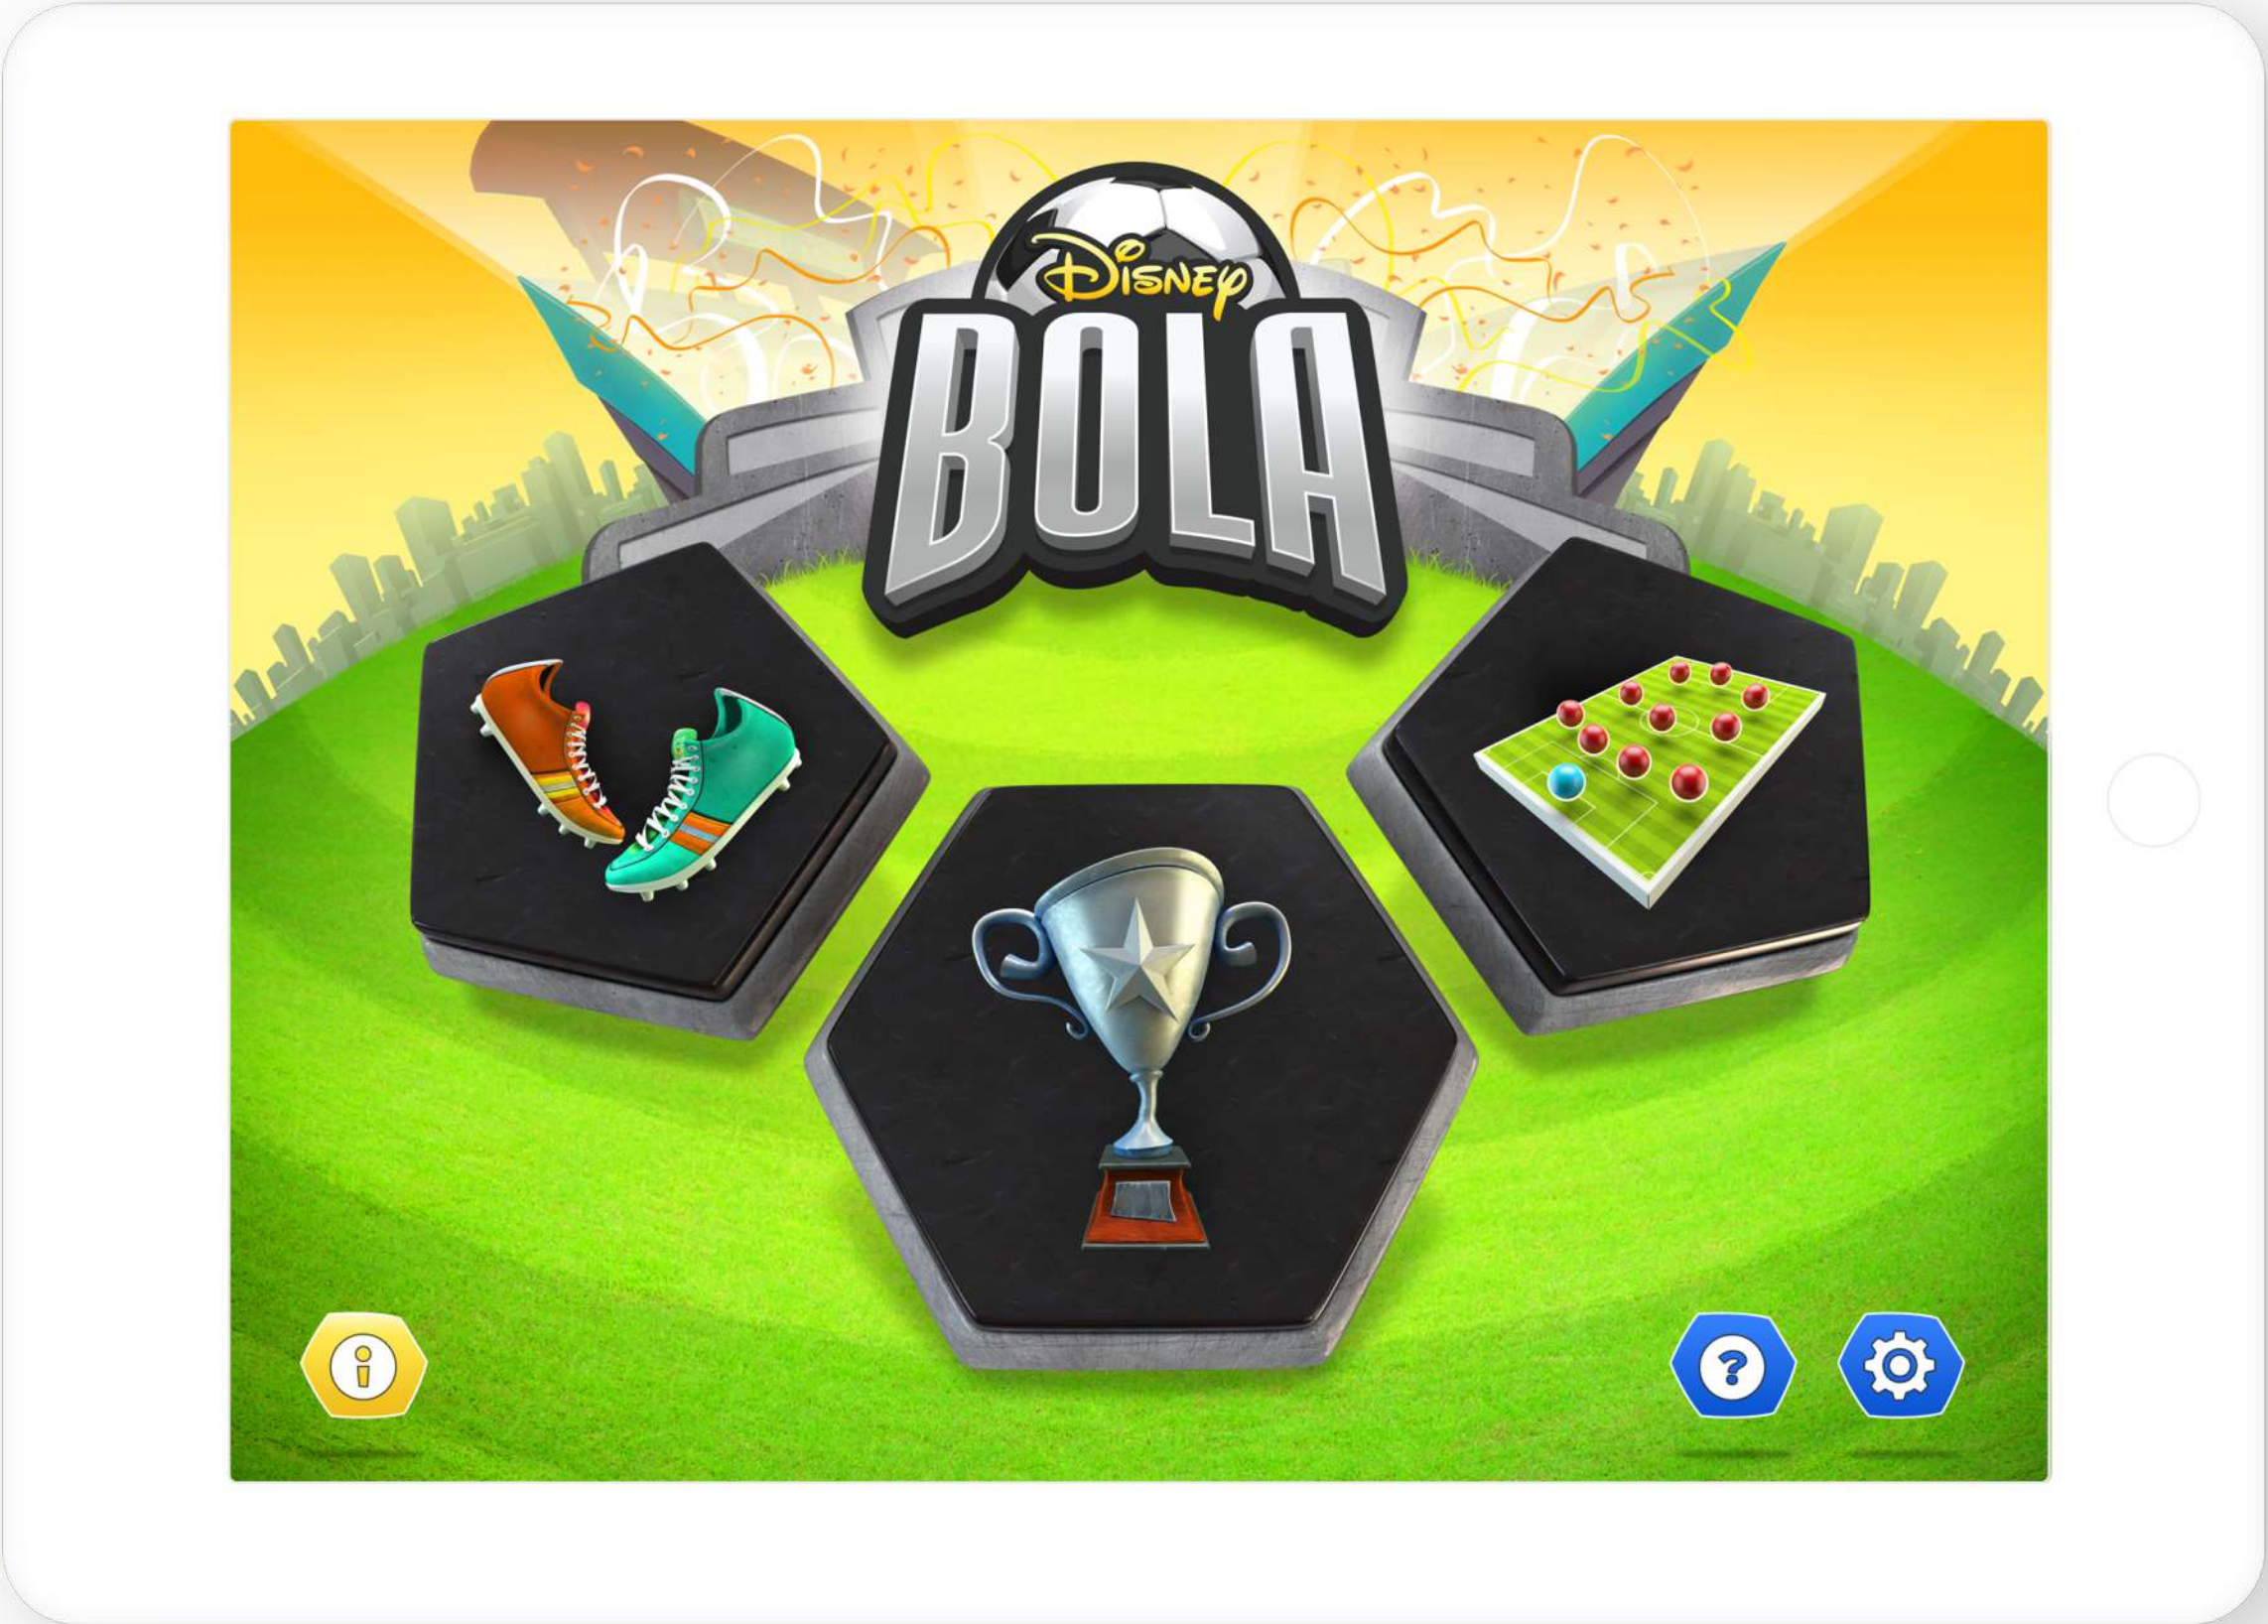

STORYBOARD

Guidelines were based on a simple and short story where user have to sign a contract and get ready to play in a few steps. Rough sketches and a simple UI was based on "art deco" styled logo brought by client.

Ezequiel de Francisco

BOLA - Disney

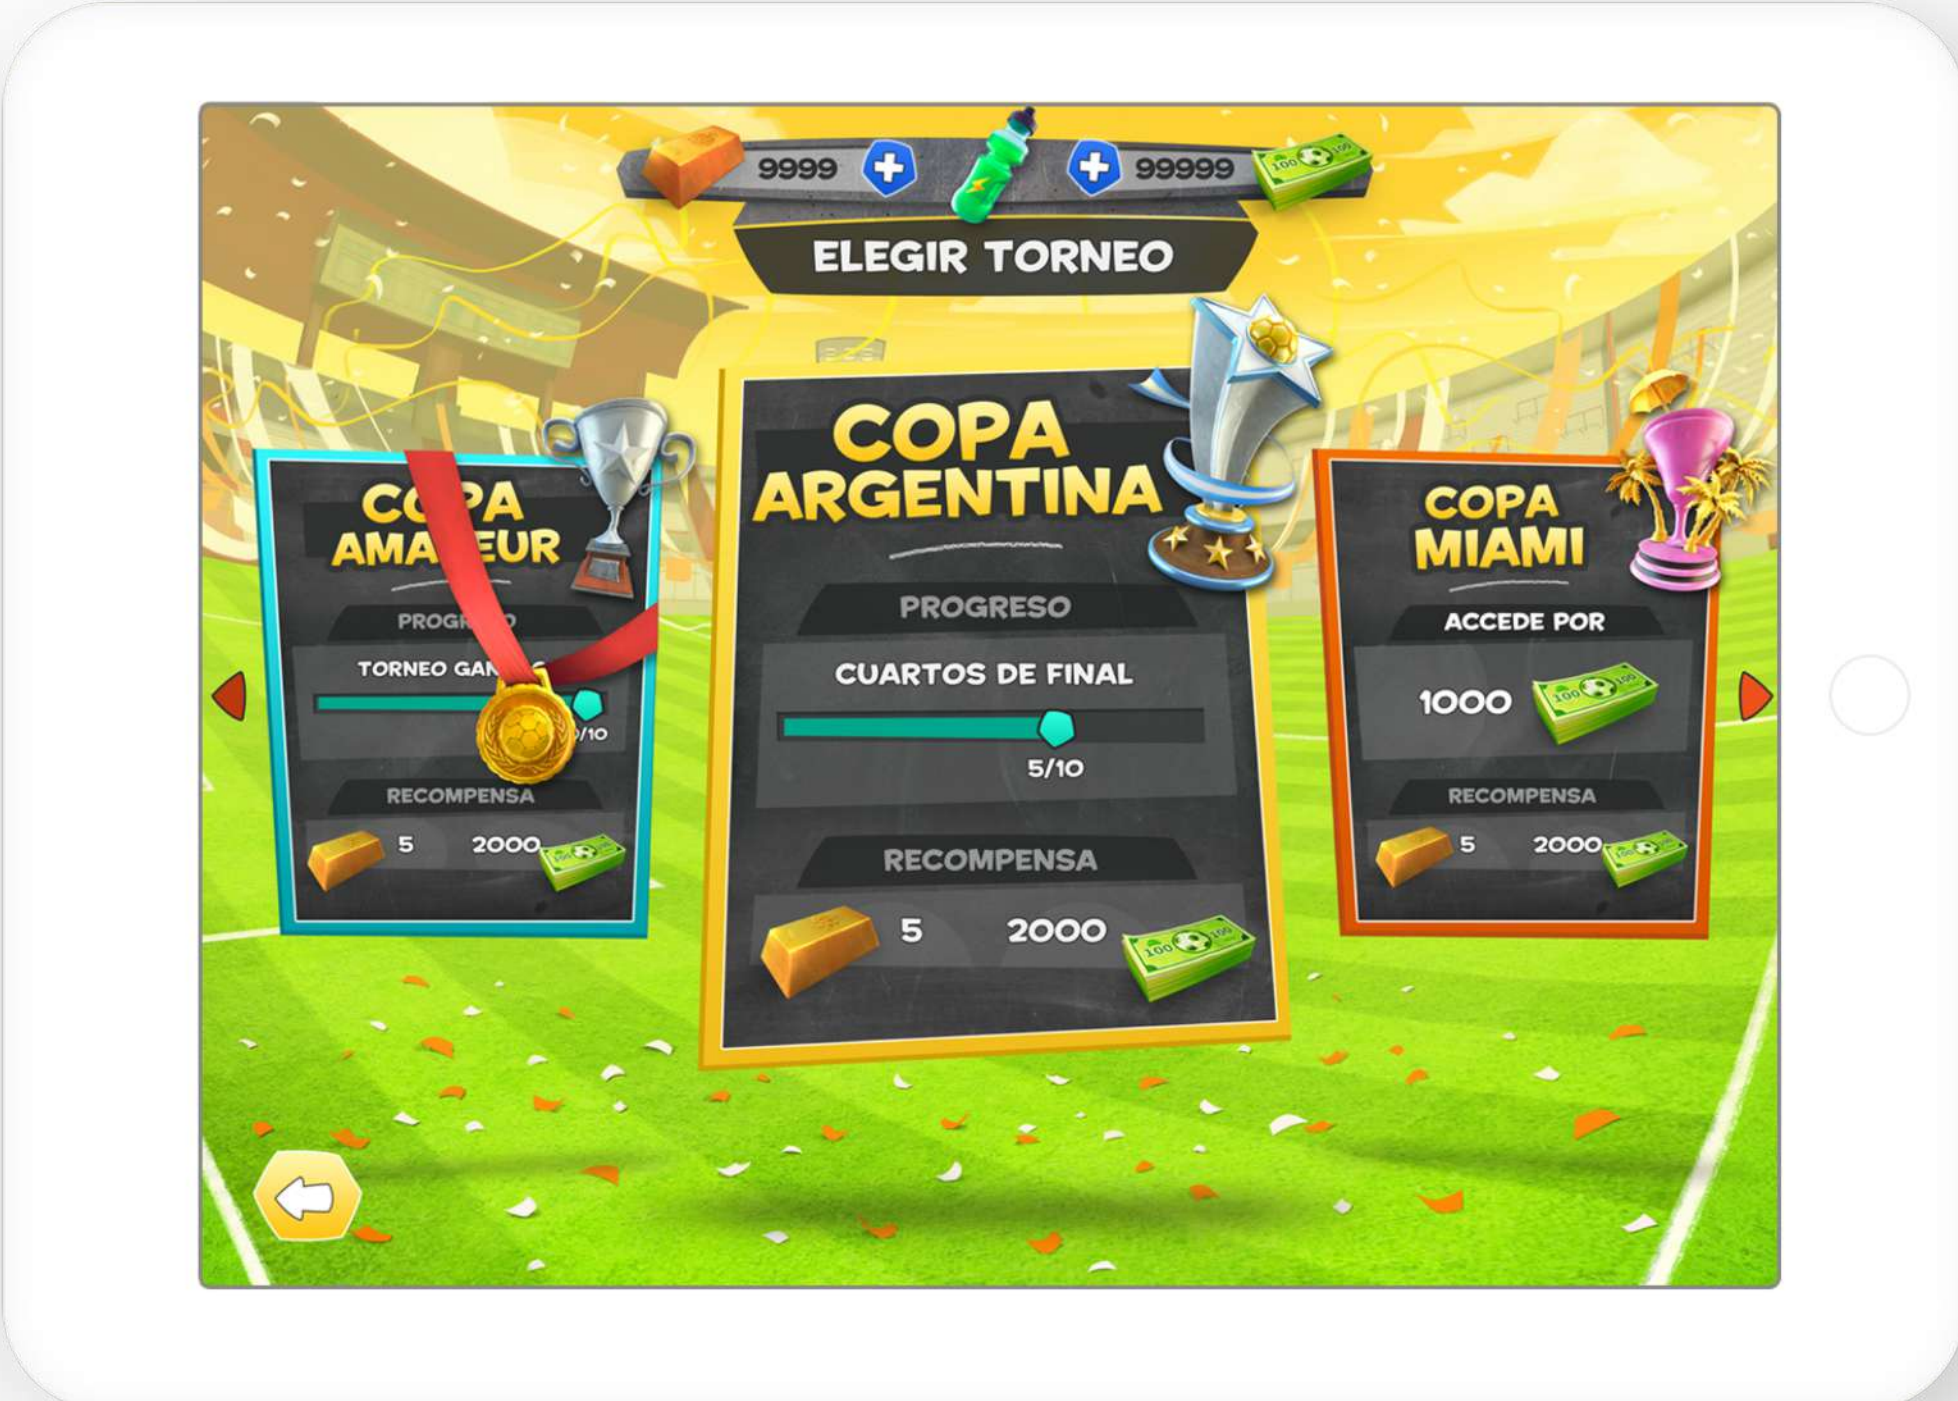

FINAL MOCKUPS

All screens went through LD to HD screens illustrated by Disney guidelines.
